News Desk

Texas pulls the plug on micros

TEXAS Instruments is to withdraw from the home computer market.

Production of the TI99/4A computer will cease in November — development of new consumer electronics products has already been stopped, and existing stocks of the 99/4A will be cleared by further reducing its £99 tag. As many as 1/2m units could be sold off before Christmas for as little as £50 each.

News of the US company's decision coincided with release of TI's third-quarter results — including a further loss of £110.8m. Sales were down 4 percent to just under \$1.01 bn.

TI chairman Mark Shepherd and president Fred Bucy, in a joint statement, blamed "disappointing" third quarter sales of 99/4A home computer consoles and software.

"With this situation continuing into October, it became apparent that fourth-quarter demand would not be sufficient to prevent large

additional losses.

"In order to limit further financial drain on TI we have made the decision to withdraw from the consumer and home computer business."

In this country the 99/4A computer has never been a top-seller. Its troubles began from the moment it was introduced in a form incompatible with the British TV system. It was supplied together with an NTSC standard monitor.

Jupiter hits the dust

JUPITER Cantab, maker of the Ace microcomputer, has gone into receivership.

The decision to fold the company was apparently taken by Jupiter's directors, Stephen Rout of solicitors Chater and Myhill, acting for Jupiter, said: "We have been notified by the directors of the company to call a creditors meeting and to prepare a statement of affairs with a view to winding up the company."

Jupiter's directors have recommended that Chater's

BRITAIN'S BEST-SELLING MICRO WEEKLY

RICHARD SHEPHERD SOFTWARE

A HOME BUDGETING & BANKING SYSTEM THAT REALLY MAKES YOUR 48K SPECTRUM WORK!

A professional style multi function Cash Controller program that can load and make an entry in just 90 SECONDS . . . thanks to its ZX MICRODRIVE COMPATIBILITY. If you're not ready to upgrade to Microdrive yet, this easy to use cassette program can handle up to 400 transactions with your Spectrum, almost filling the 48K memory of your computer.

BANK ACCOUNT

- Statements on demand from any date to date.
- Holds up to 400 transactions.
- Standing order facility.
- All transactions can be automatically coded to allocate up to 16 budget headings.
- Search facility for any single item by description or amount.

HOME BUDGETING

- 16 budget headings, e.g. Gas, Rates, Car, Tax - you can choose the headings
- Highlights under/over spending
- Full budget expenditure breakdown
- Budget "re-think" facility

LOAN/MORTGAGE CALCULATOR

All you ever wanted to know but didn't like to ask! Calculates:

- Interest rates
- Payback periods
- Capital sum
- Period of loan

REMEMBER THIS CASSETTE CAN ALSO BE USED WITH ZX MICRODRIVE

● PRINTOUT FACILITY USING ZX PRINTER

● FULL SECURITY WITH PERSONAL PASSWORD

● FULL SAVE PROGRAM ONTO CASSETTE OR MICRODRIVE

Available from good computer stores or direct by mail order... at a price that won't upset the Bank Manager!

How to submit articles

Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

All submissions should be typed and a double space should be left between each line. Please leave wide margins.

Programs should, whenever possible, be computer printed.

We cannot guarantee to return every submitted article or program, so please keep a copy if you want to have your own program returned you must include a stamped, addressed envelope.

Accuracy

Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Editorial

The demise of Jupiter Cantab, though not entirely unexpected, has still come as a blow to the micro industry.

Steve Vickers and Richard Altwasser, the two co-founders of Jupiter Cantab, played a large part in the development of the Spectrum. Steve wrote a large part of the Spectrum's Rom and manual while Richard designed much of the hardware.

However, rather than remain inside Sinclair's comfortable cocoon, they decided to try and emulate Sir Clive by setting up on their own.

Their first product, the Jupiter Ace, received a mixed reception. It had the advantage of being the first low-cost micro dedicated to running Forth, but it only had 3K Ram and a black and white display.

In a market that is being increasingly dominated by a few large manufacturers, there is far less scope for small companies than there was just two or three years ago. Even the larger companies such as Texas, Mattel and Atari have been suffering from the effects of the recent price-cutting war.

Nevertheless, while the Jupiter Ace may not have captured the public's imagination in quite the same way as its ZX brethren, it was a brave attempt. Both Vickers and Altwasser deserve our approbation for seeing an opportunity and trying to make it work.

There is an element of risk in any entrepreneurial operation — but it is better to try and fail than never to try at all and spend the rest of your life wondering 'what if?'

The micro industry will be poorer without Vickers and Altwasser. Hopefully, they will not be away too long.

METAGALACTIC LLAMAS BATTLE AT THE EDGE OF TIME

A fast and original game for the unexpanded VIC. Challenging and colorful, with great action and a unique game action and design. This promises to be the most exciting new VIC VIC game since the introduction of GURU'S WING. A really a year ago.

£5.50

LASER ZONE

Experience Laser Zone - an utterly NEW totally ORIGINAL masterpiece of video games design. Learn to control two spacecrafts at once! From the EXTRA-AREA ZONE on, after long hours of practice you control the two ships so that they function as a smooth coordinated team. Feel the raw POWER as you surge for the enemy-turret and BLAST your enemies into expanding clouds of SPACE. A blast from the future as a carefully aimed BLAST stuns into the web of your last remaining ship. An expansion required.

Available for Commodore 64 £7.50 and VIC-20 £8.

MATRIX

Off-Break has taken Gibraltar... the jungle that topped the mountain. That's in USA and UK... and treated an awesome sequel. Originally made it features multiple screens, new items and attack waves, mystery bonuses, retrograde humanoid, defector levels, diagonal tracking, soundboard game phase and much, much more.

Packed into 20 mind boggling zones and accompanied by incredible music. An expansion required.

Available for Commodore 64 £7.50 and VIC-20 £8.

HOVER BOVER

A highly original arcade game for C64 featuring outstanding graphics and a sound track created by a professional Film Director. Bover has borrowed his neighbor's Air-Max Superpower.

Move your way through as many of the 16 levels as you can before the bumbling neighbor retreats his intention. Get your dog into the neighborhood to help you out of tight spots and don't stress the customer. Try not to lose track of the neat hover balls or you'll get your neighbor.

£7.50

ATTACK of the MUTANT CAMELS

Planet earth needs you! Hostile aliens have used genetic engineering to mutate camels into monstrous beasts with 90 foot high, tear-inducing, laser-blasting death camels! Can you fly your tiny manoeuvrable fighter over the mountainous landscape to weaken and destroy the camels before they invade the humans stronghold? You must withstand withering laser fire and earn 100% Game action stretches over 10 screen nights and features superb scoring, scanner 1/2 player actions and unbelievable animation. Play this game and you'll never be able to rest a day again without getting an itchy trigger finger. Awesome VIC action.

Available for Commodore 64 £7.50

ABDUCTOR

A classic new space game! Zap the sailing alien hordes before they can fly... and abduct your humankind. Survive the board to long enough and you'll get an extra stage on your scudrons with double firepower. Awesome unexpanded VIC Action.

£5.00

GRIDRUNNER

Finally true arcade quality on the unexpanded VIC! Shows down the segmented CRACKS minding the grid. Sweeps of the grid and zippers. The awesome scenic, sound and graphics goes into the best.

Best available for unexpanded VIC. Available for VIC-20 £5.00 Commodore 64 £5.99 Atari 400/800 £7.50

Texas

Continued from page 1
priced at over £1,000.

In the US however, the machine was extremely successful and a recent survey gave TI a 23 percent share of the under-\$1,000 computer market.

However, the 99/4A was an expensive computer to manufacture, never being geared to low-cost mass production. Vicious price cutting by its main US rival Commodore with the Vic20 and Commodore 64 machines, and the low-cost entry of the TS1000 in the US and the Sinclair ZX81 and Spectrum in the UK forced the price of the 99/4A down to under £100. At this price, it was suggested by some analysts, Texas was actually losing money on each machine sold. The company was far too slow to replace the 99/4A, and was forced to shelve at least two new products — the 99/2 and 99/8. Both became outdated before they were launched.

Now Texas intends to concentrate its activities on its semiconductor division, on the business market with the TI Professional Computer, and on the calculator market.

Jupiter

Continued from page 1

senior partner, John Cross, be appointed liquidator.

Sales of the Jupiter Ace had never lived up to the expectations of the company's joint founders, Steve Vickers and Richard Altwasser. One source suggested that the company's failure had in part resulted from management weaknesses.

The Ace, launched in August 1982, was the first low-cost computer to use the Forth

Steven Vickers

language, rather than the more widely accepted Basic. However, the Ace is both silent and black-and-white. As a result it was quickly overshadowed by the Spectrum.

As interest in Forth grew,

Sinclair plans low-cost system

SINCLAIR plans a low-cost development system to encourage software houses to write material for its new 'professional' machine.

"It is our intention that there should be, for our next computer, a relatively low-cost software development system available — priced around £1,000," said Sinclair's managing director Nigel Searle.

"Keeping the serious but small software house working on Sinclair products is very important to us. Something like a Vax system is clearly beyond the realms of some houses and developing software on the machine itself is no fun. So, we have put out a contract to develop such a system for a reasonable sum of

money."

The announcement is bound to increase speculation that the new professional computer — code-named the ZX83 — will not be based around the Z80-chip, possibly a 16-bit device. Nigel Searle: "We would use a processor other than the Z80 when we can get a good price — a 16-bit device might cost as much as £10.

"Certainly we have looked at them all. We spent a lot of time looking at the 16032 which Acorn has gone for, but it is perhaps still a bit early. There is a danger of choosing a processor which does not become a standard and is not supported by the industry."

At the same time Nigel Searle reaffirmed Sinclair's

commitment to the Spectrum machine, emphasising that the ZX83 — expected to be launched in early 1984 — would not be a replacement for it.

"We have considered the options available to us, but at the present there are no plans for any new low-cost machine.

"Obviously we would consider it much more keenly if Spectrum sales showed signs of dropping off, or if we felt that a competitor was seriously on the verge of damaging our sales. But, at the moment, I don't see anything on the horizon that might do that.

"Even so, we could not replace the Spectrum except with something completely software compatible."

Atari price problems

ATARI's plan, to convert its own games to run on other microcomputers, may be hit by its own pricing structure.

A new software division, Atarisoft, is developing material for the Vic20 Commodore 64 and TI99/4A on Rom cartridge, which will be priced at £29.95. Titles for the Spectrum, Dragon and BBC machines will go on cassette, priced at £14.99.

Seven titles are planned — Pacman, Centipede, Defender, Dig Dug, Donkey Kong, Robotron and Stargate.

The Vic20 and 64 cartridge prices would appear to conversions for most other micros became available as a software option, and the Ace, not being able to run Basic, was limited by a lack of good software.

First signs of problems at Jupiter came in early June when Richard Altwasser left the company, resigning his directorship. Steven Vickers then changed the direction of the company, addressing the Ace not at the home market, but instead at schools where the machine offered a cheap Forth option.

Ironically, the Spectrum which was the Ace's most damaging competitor, was also designed by Steve Vickers and Richard Altwasser. The duo left Sinclair Research in April 1982 to set up Jupiter and design the Ace.

pare unfavourably with Commodore's own cartridges at £9.95 — a difference of £20. Similarly, the Spectrum cassettes seem overpriced when compared with a more usual price of around £6.

Defending the pricing, Atari UK's marketing manager Eric Saloman said: "These are the best-selling games worldwide and at the end of the day you are paying for artistic input."

The first title will be Pacman for the Spectrum, available in November this year. Other

titles will follow with the full range across the six machines due to be complete by April 1984.

The Vic20, Commodore 64 and TI conversions are being carried out in the US, while the cassette material for the Dragon, Spectrum and BBC computers is being developed by sub-contractors working for Atari UK.

Spectrum versions are being produced by a new company formed for the purpose, Software Converters.

GSI expands to Frimley

Sinclair's Camberley distributor, GSI, has moved to new enlarged premises in Frimley.

The expansion has been necessitated by the volume of goods being handled — GSI distribute to the high-street chains as well as operating Sinclair's mail-order service. Ten percent of Spectrum's are now sold by mail-order.

When GSI first started processing postal orders for the

ZX80 computer in 1980, it dealt with around 500 orders a week. At present GSI has over 20,000 Spectrums a week passing through its system.

GSI is now gearing up to deal with orders for the Sinclair flat-screen tv and, next year, the new Sinclair 'professional' computer. As with Sinclair's other products, the new computer is expected to be offered first by mail-order.

600XL goes on sale this week

THE new Atari 600XL computer goes on sale for the first time this week.

Its introduction marks the first stage of the company's proposed recovery plan. On it, and its more advanced relative, the 800 XL, Atari is pinning its hopes of recouping some of the huge losses incurred by the company in the last nine months.

The 600XL will be priced at £159 and replace the existing 400 machine. The 800XL —

the 800 replacement — which it is still hoped will be available in quantity by late November, will sell for £249. The 600XL will be upgradable to the 800XL for the price difference of £90. The two new machines are completely software compatible with the existing 400 and 800 computers.

"Both machines will have all the features we have had with the 400 and 800, but at a price we can make money at it," commented Atari UK's man-

Graham Clark.

aging director, Graham Clark.

"Everyone, over here and in the US, is stumbling through a period when margins are declining, and some will go down.

"But Atari is here to stay and we are beginning to recover our position.

"In most of the major markets I think we will see good sales this Christmas. Obviously it takes time to build back up a market share like Commodore or Sinclair, but I think by Christmas 1984 we will have a very substantial piece of the UK market."

Interface for Model B

THE Pro-link is a programmable joystick interface for the BBC model B.

Manufactured by Aztec Software, the Pro-link enables any Atari compatible joystick to be linked to the BBC via the user port. Nine different functions can be programmed into the joystick, such as fire, up, down, right and left.

The Pro-link package, which consists of an adaptor and a software cassette, costs £9.99 including VAT.

Aztec is also about to release Centronics printer interfaces for both the BBC and the Commodore 64. A combined printer/joystick interface for the Acorn Electron will also be available by the end of November.

Aztec Software, which is based at 18 Gregory Springs Lane, Mirfield, West Yorkshire WF14 8LE, will be exhibiting their wares at the Northern Computer Fair, Manchester, on November 24-26.

New MD for Mattel

THE new managing director of Mattel Electronics UK, after the departure of Mike Lunch earlier this month, is to be Ian Wilson, presently the acting managing director.

The announcement comes amid increasing speculation that the struggling US parent may try to sell off a part of its toy division's stock to raise quickly needed funds. Unlike the stricken electronics division, the toy company is enjoying a record year.

It is also reported that, at one point, Mattel seriously considered closing down its electronics and computer division entirely before the end of this year. This option now appears to have been ruled out because it could damage any sell-off of toy division stock.

Schools fair

THE Educational Publisher's Council is organising a Schools Computer Fair, aimed at teachers.

The event is being held at the Regent Crest Hotel, Carburton Street, London W1. Doors open at 9.30 am on both days, closing at 8 pm and 7 pm respectively. Entry is free.

Former Ed joins Acorn

FORMER *Daily Express* Editor Christopher Ward has joined Acorn. He was appointed a non-executive director in June this year.

His responsibilities include looking for marketing and communication opportunities.

"A lot of people have expressed surprise at an ex-Fleet Street Editor going into the field of micros," he says, "but it is actually quite natural. Micros and newspapers are both in the business of transmitting information and are moving closer together all the time."

AWA take-over

AWA Software has been taken over by MC Lothlorien.

The three AWA programs, *Orion* — an arc assembler/disassembler — and *Beetlemania* and *Bedlam* — action games for the Spectrum — will now be marketed by Lothlorien.

Also, Steve Hughes, AWA's programmer, will join Lothlorien on an exclusive contract to produce further arcade-style titles.

1000 Metalab applications

SINCLAIR Research is still sifting through over 1,000 applications for the few vacancies at its new £2m research and development centre at Milton Hall in Cambridge — Metalab.

When the facility was first announced in June this year, Richard Cutting, formerly of Cambridge Consultants, was appointed to head it up. He announced that Sinclair would be looking for a small number of top-flight researchers to work at Metalab, investigating a wide range of topics from battery technology to robotics.

About 12 people are ex-

pected to be chosen, although the final number will depend on the strength of the applications. A spokesman for Sinclair Research said, "Nearly all of the 1,000 applications have been of an extremely high quality."

Richard Cutting.

Chess prize money

ACORN Computers is to provide over £40,000 in prize money for the World Chess Championships, due to be held in Britain for the first time next month.

The company, the only one to sponsor the event, will make an additional donation of over £20,000 to the competition organisers, the World Chess Federation.

A suitable arena for the contest — to be known now as the Acorn World Chess Championships — has not yet been found.

Commodore profits go up

COMMODORE International has again reported increased profits.

Sales for the quarter to October 1 were up to \$209m, more than doubling the \$103m earned in the previous three months.

The figures are in sharp contrast to those announced in recent months by many other big US computer companies — many of whom have reported heavy losses.

MR CHIP SOFTWARE

SPECTRUM GAMES

SPECTRUM DARTS (48K)

Five games of darts for 1-5 players, 501, Cricket, Killer, Round the board, Noughts and Crosses, four levels of play per game, take on the computer or friends at these games of skill and judgement **£5.50**

WHEELER DEALER

As for the Commodore 64, but now available for the 48K Spectrum, Texas T.I.99/4A and Dragon **£5.50**

DEALER ENQUIRIES WELCOME

Which joystick?

I have recently acquired a 48K Spectrum and I would now like to add a joystick for added enjoyment of the many games available. However, I am somewhat confused as there appear to be many different types of joystick on the market. I wonder whether you or any of your readers might advise me on the best choices for use with the Spectrum. Perhaps anyone answering this plea for help would also advise me of the pros and cons in respect of their recommendation.

Flight simulator

I have recently purchased a Vic20 home computer and as I am very keen on aircraft I have been trying to find a flight simulator for it. However, so far I have been unsuccessful and I would appreciate your help. Please could you tell me if there is currently one on the market, and if not, whether there is one planned for the future.

Kevin Smith

Surprisingly enough, I am not aware of any flight simulation programs for the Vic20, though they seem to abound for other machines. If any of our readers know of such a program, hopefully they will write in and tell us.

Dragon disc drive

I have just read this week's issue of your magazine (20-26 October) and I was interested in the letter from J.A. Niblock of Nuneaton. There are one or two points that I would like to raise in connection with this, to save other readers with Dragon disc

drives getting confused.

I agree with the first point concerning the use of separators, but the second point raised is rather misleading.

In the manual (preliminary version) it states that the end of a file can be detected by Eof ("File"), which will have the value of 0 if the read pointer is at the end of the file or 1 otherwise. This is incorrect, the values should be reversed, i.e. Eof ("File") = 1 if at the end or 0 otherwise.

There is a further problem here however. If you follow convention, and check for Eof before a Read command, you will get a value of 0 returned. This is because the system variable Eof is reset to 0 by the next Basic instruction. This means that Eof will only have the correct value of 1 at the end of the file, if the Eof function is used after the Read command. The way this is used would be:

```
IF EOF ("FILE") = 1 THEN do and
```

```
routine ELSE action
```

Another point worth noting is that it is not necessary to use the file specifiers for Eof, i.e. *Dat, Bas, Bak, Bin*.

With regard to point 5, J. Niblock says that only 5 read and 5 write files may be open. This is 10 and not 5. When a file is written to for the first time (i.e. it is created) the file pointer will default to the beginning for *Read* and *File* and to the end for *Write*. Therefore, you may have 10 files open, the controller does not discriminate between the two. I regularly use 9 data files simultaneously without trouble.

The patterning on the screen could be caused by a number of things. There is a certain amount of interference caused by any external (to the cpu) event, as can be seen when using *Sound* or *Clod* and *Save*. This would seem to be a fault of the modulator. I have converted a colour tv and fitted a video input to it, and have no trouble. This problem is also quite apparent when using *Teletwriter* and printing.

The power supply, although running warm, should be quite adequate for the controller. My machine gets left on with Tandy's *Edtasm+Assembler* cartridge in for days at a time and I never unplug the power supply, so the transformer is always warm. It is much more

likely to get hot, due to the fact that the cpu is doing a lot more work by loading and dumping data to disc.

When I bought my drive, the controller was faulty but this was quickly changed by my supplier, and the system is very robust and forgiving. I would suggest to J. Niblock that he get his system checked out by his dealer.

Issue 3 problems

The letter from Sinclair Research in PCW, 13 October, on the basis of practical evidence, is untrue, and your footnote to the letter from J.S. Mellor is too complacent; there is a real problem with the parts on the Issue 3 computers!

I recently found it necessary to purchase a new Spectrum when my Issue 2 Spectrum, went on the blink.

The new computer was an Issue 3 model. Contrary to the claim made in the Sinclair letter that 'D6 is set to zero when there is no signal coming from the tape recorder', I found that this bit, unlike Issue 2 computers, is highly unstable. The bit went from zero to one, in an irregular fashion over a period of ten minutes, when the computer was started from cold.

This was tested several times (without any tape connections made to the computer) with the same result.

In the hope that this instability was a one off, I have exchanged the computer twice and have found exactly the same problem.

In one of my more used programs I use port 254 as a computer port — after all Issue 3 is a computer for input of information, and as this is done through the ear socket. I use D6.

Issue 3 has a hardware problem, and Sinclair should face up to it. Good hardware practice demands that inputs and outputs from chip systems are firmly referenced to either of the supply rails — to demand, as Sinclair does, that the software should be tailored to accommodate their problem is

to make the tail wag the dog.

Manic Miner

Owners of a 48K ZX Spectrum who have purchased *Manic Miner* may be interested in the following. Load *Miner* in the normal way. When it loads press *Enter* then type in the number 603 1769.

If you typed it correctly, a boot should appear bottom left of the screen. You now have access to the 20 caverns.

Room	Code
1	6
2	61
3	62
4	621
5	63
6	136
7	632
8	6321
9	64
10	641
11	642
12	6421
13	643
14	6431
15	6432
16	12346
17	65
18	651
19	652
20	1268

Supposing you wanted to go to the final cavern. Simply press keys 6 and 5 and 2 and 1 all at the same time, and then release them quickly.

Manic Miner again

Here is a *Poke* which I should come as a relief to any remaining sane people with a copy of *Bug-Byte's* superb *Manic Miner*.

Yes, Willy is now unstoppable! The magic instruction is *Poke 35136,0* which should be inserted as line 25 in the short Basic program which loads prior to the title. For the technically minded, this replaces the *Dec (H)* instruction which subtracts one from the number of lives remaining, replacing it with a *Nop* instruction.

Diamond Digger

A new game for 48K Spectrum by Jim Provan

In this game, the object is to move your spade around the different grids, digging up diamonds. Occasionally, an alien will drop down one of the columns. If you are hit, you lose one of your three lives. You are represented by the spade which

starts in the bottom corner of the grid. After each grid has been mined, you go on to the bonus stage. Your spade moves along the top of the screen until you press a key. Then it falls down the column it is above.

The object is to land it on the diamond. Bonus points are awarded, depending on the colour of the diamond. Use the cursor keys for movement.

This game was written on a 48K Spectrum, but it may run on the 16K machine. ■

Off the record

David Kelly talks to Jack Florey and Ashley Gray from CBS

Much has been said recently about the way the home computer industry has "grown up".

By far the biggest upheaval has been in software selling. The games have moved out of the mail-order coupons and PD Box numbers into the stores and high street retail chains.

It has not been an easy transition. In many cases the additional responsibilities have not fitted easily into the company's plans and a number of service companies are now offering distribution arrangements, helping to take the load off the software houses.

Some are new companies, like Prism. Others are established distributors in other areas who have moved to include video games. They come mainly from the book publishing business, like Websters, or from the record industry like CBS or K-Tel.

CBS particularly have made a name for themselves because they have adopted a policy of signing up companies like Quicksilver and Bug-Byte.

CBS first began to look at the computer market in February this year, after they detected a big growth in the number of cassettes being used for computer software.

Jack Florey, CBS's commercial director, explains the decision: "People now have more leisure, sadly partly to do with unemployment, and, as a result, the whole leisure market is growing enormously — which means records, videos and now a part of it is computer games. That is why we decided to go into it."

"At the moment games form only a small part of what we do, but software is going into the record shops, the retailers are moving in, and we must follow."

So, in the early part of this year, Ashley Gray was brought in by CBS to look more closely at the market. An accountant and chartered secretary, his interest was in "the commercial side of corporate life" and, particularly, business development.

He says: "We began to look at computer software seriously when some duplication houses started pushing work our way, work which was for them 'overload that they couldn't handle'."

CBS made the decision to enter the

market as manufacturer and distributor. "Considering we were very late in the market we have moved a long way in a short time," says Ashley. "The philosophy was always that we could go on the back of our existing involvement in these areas for the music industry, using the 'quality' image of CBS."

CBS offered something that the software houses needed, a company which would take away the hassle of the manufacture and distribution, whilst at the same time leaving the decision making — which title, how to advertise, and so on — still with the software house.

And, to prove the point, CBS has now in its roster independent software companies Quicksilver, Bug-Byte, Virgin Games and Rabbit.

Ashley explains the reason behind the choice: "There will be a big shake-out in February or March next year, and the smaller software houses will disappear. Perhaps even they are producing first-class games, but they will get left behind, not because they are doing anything wrong, but because other people are moving ahead so fast now."

"What we tried to do was to identify those in the market who knew what they were doing and who were likely to succeed in the future."

That is not to say that Ashley reckons that after the "big shake-out" there will be smaller companies with good material who will be left high and dry. Instead, he reckons these companies will form a kind of second tier. They will concentrate more and more on the creative business of games writing and programming. "Wherever that creativity pops up it will be taken to one of the companies which does have the resources to take it to the market."

"That great game will always get there somehow — it is like the author who hawks his book round the publishers, and the last one sees something in it and it becomes a million-seller."

Ashley is convinced that the software industry will become more like the music industry: "It's a hit industry. At the moment there are so many companies that games are considered company by company. When there are fewer companies that will change — things will begin to focus on individual authors. And charts will come. At the moment they are a mess, but one chart will emerge as the one."

"We are still going through the boom phase and the market is very volatile."

Jack Florey

Somebody could still just enter the market and become the number one, building the whole company on one top title. Just like Virgin did in the record industry with Mike Oldfield's *Tubular Bells*."

He believes that the market will mature to become marketing driven rather than product driven. "That will be what counts. You have got to make the buyers want the product — you've got to catch their imagination."

"K-Tel are getting in. They are bound to go on tv and just put the games up on screen, it is an ideal medium because it is definitely the quality of the on-screen graphics that will sell a game."

In his view the software market is ideal for CBS: "In a hit business the most important thing is to be able to get the product to the market. Demand for a particular game can develop over a weekend, and drop off just as fast. Our job is to make sure that the companies we deal with make the most of each of their titles."

"Our experience is in the record business which is very similar."

CBS offers the software house cassette manufacturing, packing and distribution to the shops. For that CBS makes a charge on a per-unit basis.

Jack Florey again: "We are just going to a label and saying 'Use our warehouse as your own. We want the software house to keep its identity, choosing what to release. It's like a partnership arrangement."

"The label is free to concentrate on what it is best at — building up a repertoire and marketing in their own style. After all, they know their own business better than we do."

CBS's manufacturing is centred at Aylesbury, feeding to a central warehouse in Shepherd's Bush, London. From there the tapes are dispatched all over the country by Courier Express.

Eventually CBS hopes to build up a roster of six or seven independent software "labels". "We want to end up," says Ashley Gray, "with the same share of the video games market as we already have in the video and record industries — about 40-45 per cent."

Ashley is not, however, looking for additions to the first four until the New Year. "The whole thing is building up to an enormous pre-Christmas crescendo and at the moment we are concentrating on looking after the people we've got."

Ashley Gray

Questions and answers

Keith and Steven Brain take an educated look at learning programs for the Dragon

Dragon Data promoted the Dragon as the 'family computer'.

The implication being that a Dragon would help you to learn more than just how to improve your reactions and zap the aliens more rapidly.

A number of companies are now offering educational programs of one sort or another for the machine and, as many of these are not easy to find in the high street, and it is always a bit of a gamble buying unseen by mail-order, here is a review of many of the current offerings.

Infant Pack from Shards contains two programs for the very young. *Bottles* teaches and tests counting to the relentless accompaniment of the tune *Ten Green Bottles*. *Alphabet* is designed to teach the alphabet and, although it has some nice ideas, it falls down rather on the education side. Letters are displayed on a small 'TV' in the centre of the screen, with a corresponding word and small picture at the top. Unfortunately, many of the letters are drawn in a strange way which is likely to confuse rather than help small children.

First Letters and Words is a new program from Abacus which is a first-class demonstration of how to really use the educational possibilities of a computer. It is designed to teach young children how to form lower-case letters and words, which it constructs on the hi-res screen exactly as you would write them on paper, at a speed controlled by the user. The first option forms the lower-case letter corresponding

also gives an example of a word beginning with this letter. Option three displays the entire alphabet, option four produces random words, and option five shows random Christian names. The final option allows you to write text on to the screen and then replay it.

Without doubt this program is one of the more impressive educational programs we have seen and we would thoroughly recommend it to anyone with children at this stage. The author, Dr M E Newton, has really got to grips with a difficult problem.

Baby Dragon 1, from Gravesend Home Computers, contains two programs for very small children entitled *Koko* and *Teddy*.

Koko is a simple maths-test program which checks simple addition, subtraction, multiplication or division at one of three skill levels, and it is very well dressed up for small children as a game in which Koko the clown will be dunked in the water if you score 100 per cent. Although only low-res graphics are used, this is combined with interesting sounds and a lot of humour to make an attractive package.

Teddy shows very well how a simple idea can be made interesting so that youngsters can learn as they play. It is essentially a test of counting, but the plot involves saving pots of honey from a line of sleeping bears which are liable to wake up at any moment and eat it. As you might expect this is accompanied by a rendering of *Teddy Bears' Picnic*.

designed to teach tables. Although it has a number of options it is not particularly well conceived or executed. It appears that Micro De-Bug are also testing out Dr Goebbels' theories on propaganda as every single line printed has their logo (MDB®) at the start — thus wasting 16 percent of the screen space!

Maths Tutor from Abacus contains *Primary Addition*, *Junior Maths* and a *General Test Routine*. The first is a very simple routine which only involves counting spots on dice and entering the number. If your answer is incorrect the right answer is shown, but no attempt is made to show how the answer was obtained. *Junior Maths* is better as it has 10 skill levels, gives a more detailed breakdown of your performance, and tests addition, subtraction, multiplication and division.

The third choice, *General Test Routine*, allows the teacher (or parent) to set up a test file on tape containing particular questions and answers. In this case, of course, the teacher rather than the computer is always right! After the test has been carried out a record file can be created and later replayed to prove to disbelievers how you got on.

Spelling Tutor is another program from Micro De-Bug, this time teaching spelling. The program loads words from an Ascii file on the tape and the format of the test shows several words displayed together, of which one is incorrectly spelt, and must be corrected. Once again the ubiquitous logo is much in evidence.

Test your knowledge of animals

Music Tutor from Abacus was designed to aid anyone learning a musical instrument. Abacus claim that by using it you can 'learn to write and play music instantly'! It offers a wide range of facilities allowing you to create, play, amend, delete, save and load tunes. Music can either be written in more or less normal Dragon *Play* format or in what Abacus calls 'template' mode. Here the notes and the possible length octave and volume options are specified in table-form. It seems strange, however, that no reference is made in the program to conventional notation — minims, crotchets, etc.

The instruction leaflet explaining the facilities is rather brief and it therefore took some time for us to sort out how to use the program. Tunes can be saved in Ascii format and four demonstration tunes are supplied with the tape. It is possible to specify a *MusicPrint* mode where the notes are displayed on a staff in hi-res graphics.

The four-colour *PMODE 3* is used, rather than the highest resolution *PMODE 4*, so definition is a little lousy and we also feel that it would have been more logical to have drawn each note as it was played.

Live and Learn by Shards contains six programs. *Graphics* is a step-by-step tutorial on the hi-res graphics, but it falls down

Junior Pack, again by Shards has two good programs which are games. *Tables*, not surprisingly, tests your knowledge of multiplication tables in a game where you try to guide a cursor to safety. It is intended to help a child to learn his or her tables without realising it.

Jumbler is a word recognition game where you have to fill in missing letters to complete a sentence. This is quite good fun but rather frustrating as your answer must be exactly right and not just 'possible'. The number of available words is limited so some very strange sentences appear. For example: "The poor man walks to the wooden tent!" Your success seems more likely to be due to ESP or lateral thinking than to actual knowledge.

Tables Tutor from Micro De-Bug also

TIGER I.O. TEST		TIME 00:40
WHICH OF THE NUMBERED FIGURES FITS INTO THE VACANT SQUARE?		
1		8
2		+
3		→
4		+
5		→
6		8
ANSWER: <input type="text"/>		
ENTER TO PASS <input type="button" value="CLEAR"/> TO TERMINATE		

to a single key press. An important feature is that where a 'downstroke overwrites an 'upstroke' this is indicated by a change in the colour, which mirrors the action of your pen. As the speed of formation can be altered, the running of the program can be easily adjusted so that the child can copy the letter on paper at the same time.

The second option immediately produces the letter for the key pressed, but

rather as all the words appear separately on the text screen.

Music is a similar attempt to explain sound on the Dragon which suffers from the same problem, and also contains a simple *Organ* program. *Zoc* is a simple database program containing facts and figures about some animals which you can display, or test your knowledge of. A world map is included which shows where the animals live in the wild.

Survive is based on a survival exercise in which you have crashed in the desert and must decide which of the objects at your disposal are of greatest value to you. This is really just an interesting game, as the chances of you needing this information seem rather remote (don't write and tell us that you happen to live in Timbuctu). *Britain* produces a good map of Britain and then displays the location of a number of towns and "cities" (sic), together with some information about them.

This is an interesting idea, but we are a little worried about the accuracy of the information. For example, we hardly think Reading is in the East Midlands, we are not sure what an Anglo-Saxon was, and the information about some of the towns seems to be rather out of date.

The text is displayed one character at a time and is accompanied by an irritating beeping noise which is sure to make you turn the sound off! *Map* uses the same map of Britain to test your geography. You are asked the location of a town and then you are shown the map with a number of possible points marked on it. A flashing cursor must then be moved to the correct point.

This is quite a nice idea but it is a pity that the authors of the program forgot to arrange for the cursor to put back anything it passed over. With so many programs on the tape it takes a long time to load the ones near the end. Also, sad to say, we do not rate the educational value of this selection very highly.

Tell the Time in French, English and German from Abacus first loads a general routine in which you choose in which language you wish to learn the time, and then loads the appropriate language program. A nice display of a clock-face is produced but, once again, you must jump back to the text-screen to enter your answer.

There is quite a long delay before each new time is displayed as the program redraws the clock-face from scratch each time instead of just erasing the old positions of the hands. The program is very particular about how you write the time — for example, you must always use '5 TO 9' rather than 'FIVE TO NINE' or '8.55'.

In the foreign-language versions some explanations of how to write the time are given, but you are advised to write these down on paper which rather seems to defeat one of the objects of using a computer. Surely it would have been better to have designated a Help key to call up the list if you get stuck. Although he may

be good at telling the time perhaps the author needs some "practice" (sic) at spelling.

O' Level Geography Weather Map Symbols (again Abacus) is a higher level program, designed for use in school or for home revision. You can choose to learn or test yourself on four groups of weather-map symbols (cloud, weather, wind and front) and within each group there is a further choice.

The graphic display of the map symbols is very clear, but we must criticise the fact that this program does not put any text on to the hi-res display. In test mode, symbols from one group are displayed at random, and your final score reported as a percentage of correct responses. This represents pretty basic use of the computer.

Measuring Instruments also confirms that Abacus' newer programs are marked improvements on their old ones. The first option tests your skill at reading the distance between two arrows pointing to graduations on a ruler. The lowest level always starts from 0, but life is more difficult at the higher levels. If you are wrong then you are asked to read each point separately, and then calculate the difference.

At Level 7 we had great difficulty reading to two decimal points (which we suppose what they were trying to prove!) and were glad that the computer eventually gave up in disgust and gave us the values to subtract. The second option deals with the vernier calliper, and the third the micrometer screw-gauge, the principles of which are both first explained. The graphic display of the calliper and micrometer are superb and they include close-up views of the actual scale.

Not to be taken seriously

Tiger Grand Prix, by Tiger no less, is described as an educational game which makes learning fun. It consists of a main program and a series of 13 data files, and it comes with a small instruction manual.

The game consists of a race, where your progress depends on the accuracy of your answers. Questions are picked according to the throw of screen 'dice', and the grmlins are waiting to catch you if you make a mistake. What happens if the grmlins catch you is supposed to be a secret, so we won't spoil it by telling you.

The data files provided are arranged in four stages for different age groups (from 7-10 to 16+) and the questions are very varied. Tiger are preparing a program which will allow you to construct your own

data files to use with this game, which will greatly improve its value to the user. (Tiger even suggest you might put driving test questions on to the Grand Prix program which seems quite apt!)

This is a carefully thought-out idea which has been properly produced and the program should have a long and useful life.

Tiger IQ Test, again from Tiger, is something rather different. It tries to assess your IQ, but it is rather amusing to read the "Government Health Warning" in the instruction manual which advises you not to take the results too seriously. All the display is on the hi-res screen and looks

impressive.

The tests look at general intelligence using numerical, literal and visual problems and there is a 30-minute time limit. Full instructions are given on-screen. Before the test proper there is a demonstration to show you what to expect. The final assessment reports are interesting, but at first we did not do so well. We were a little upset to be advised that we might be able to "learn some useful tasks under supervision, be able to attend to some personal wants and avoid dangers, and should live in an institution".

Teach-type, from DICOSoft/Gravesend Home Computers, is a specialised program to teach touch typing. Two versions are provided (one using the high-speed *Poke* to speed things up). The program starts by even explaining how you should sit and then the screen display shows a pair of hands and an exercise which you must follow.

The exercises start with one finger and slowly build up to more complex situations. It is quite easy to avoid the usual problem of cheating, by dropping your eyes to the keyboard, as each letter you press instantly appears on the screen immediately below the current point in the exercise. If you make a mistake, that letter is inverted and your speed and accuracy are continuously shown as both histograms and numbers so you can see how you are progressing.

From the start actual words are used for the exercises, which is more interesting than other "gobbledigook" typing practise routines, and you progress to short

MICRO-SYSTEMS AT LION HOUSE

LION HOUSE

TEMS AT LION HOUSE

Lion House has been established in Central London for over five years and is now London's largest computer store, uniquely placed to offer all you need to make the most of the micro.

Under one roof we offer everything you need for home and business computing. A complete range of the best computers and video games, together with the largest selection of software, books, peripherals and accessories. Backed up by expert advice and in-house service, we have the expertise to meet all your computer needs.

- Home computers
- Complete business systems
- Wide selection of add-ons
- Largest range of software
- Largest selection of computer books available
- Fully qualified after-sales service
- Impartial expert advice

phrases based on the 150 most frequently-used English words.

One of us has typed with four fingers for the past 20 years, in spite of several well-intentioned attempts at learning to do it "properly", but this is the first system he has tried which he felt he might actually manage to follow for more than a few hours!

The *Teletutor 1* package from Microdeal is a suite of four programs, none of which are available separately. As is so often the case with Microdeal, these are conversions of American programs for the Tandy, but we are pleased to say that all transatlantic idiosyncrasies have been carefully removed.

The first program is *Spelling Test* which will either use a demonstration file or is designed to allow you to easily produce your own files. This program scores over its rivals as it uses actual speech on a cassette sound track for the tests. Instructions are available on-screen and a volume check is included before you start. The demonstration voice track features a very well-spoken lady (obviously not an android) who pronounces a word and then puts it in context in a sentence. You then type in your answer, and the sequence is repeated, until the test is complete.

The second program on the first tape is *Word Drill* which gives a definition and a series of alternative options from which you choose. It suffers from the problem of all

tests of this type that the limited number of possibilities available in memory mean that several of the choices are nonsense (eg, the capital of France is Bernard Shaw!). The length of time for each question can be adjusted.

Four first class programs

The second cassette contains two mathematical programs designed for the younger age group. *Math Drill* is a test of addition, subtraction, multiplication and division, with the "reward" of producing a smiling face if you continue to answer correctly. Up to six students can be tested at the same time, with up to 50 questions of different types and skill level.

The program is unusual in that an up arrow indicates your position on the answer line and you are required to enter the answer in the order you would calculate it (eg, for $50 + 50$ you must type 0, 0 and then 1). This may seem unimportant in simple examples but is very significant when you get to level 10 (try dividing 36097 by 105 in your head) it also allows you to use remainders in division, and calculate each part of a long multiplication separately.

The second maths program is *Estimate* which tests mental arithmetic but is again unusual in that it keeps a record of how close you get to the correct answer.

At first sight the package looks rather expensive, but the cost must be put in context by considering that it consists of four first-class programs and an elaborate manual, and that you can easily adapt it to suit whatever you want to test.

Finally we will take a look at a couple of database programs as these can usefully be used to store and retrieve information by the more advanced student.

Profile from Micro De-Bug comprises a tape and a user manual which describes the structure of a computer filing system quite clearly and then gets down to explaining how to use it. A nice feature is that it gives a picture showing what you should see on the screen at each point (besides the ever-present MDB of course!). It is, in pity,

though, that a demonstration file has not been included to experiment with.

The maximum number of records is 100 (although you can start with a small file and enlarge it later). It is not necessary to specify the number at the start, as you simply type "*****" at the start of a record to indicate the end of the file.

The number of fields per record is rather limited as the maximum is four, so it is difficult to even record name, address and telephone number in normal format. The maximum number of characters in each field is 20, which is again rather small, but a scale is provided as you enter characters so you can see if you are running out of space in the field. Unfortunately, there is no indication of which field you are entering data to.

You can edit an entry quite easily, but to add more entries you must use the edit mode, which is rather tiresome. Files can be saved and loaded, and you can find a string provided that you specify the field to be searched. The maximum size of the database is 8,000 characters, and there are no sorting or printing facilities, which further limits the value of this system.

The *Filing System* from Progressive Software is a much more ambitious package which consists of four cassettes and a manual. The system is suitable for the beginner as a Lesson tape is provided which uses a voice track and sample files to take you through all the stages involved in using databases.

The system actually contains two different databases. *Version One* is self-contained and free-format, so that it is not necessary to specify field sizes, lengths and so on, in advance. In *Version Two* the maximum number of fields per record is 22 and the maximum number of characters per field is 40, but maths functions can be incorporated to modify records, the screen is mapped, columns can be totalled, an extra screen can be used, and searching and sorting is faster than in *Version One*.

The records can be sorted in numerical or alphabetical order of a specified field. Databases for *Version Two* must be first produced with the *Create* program, but Progressive also provide the facility of converting a *Version One* database to *Version Two*. A printout facility is provided and, although it is not specified, the maximum database size appears to be 13,000 characters.

The manual is comprehensive and clear and although *The Filing System* is twice the price of *Profile* there is no doubt in our minds that it is a very professional (not to say progressive) product which fulfils the majority of standard database functions and is well worth the money.

It is interesting to see that Progressive actually give a listing and explain their program instead of trying to protect it! This is obviously useful to anyone who wants to learn or modify the program for a disc system. Our only small gripe is that the quality of the sound track is not as good as that on *Teletutor*.

NOW YOU CAN LIFT STATIC DRAWINGS, PHOTOGRAPHS, ETC RIGHT OFF THE PAPER AND BRING THEM TO LIFE INTO YOUR PROGRAM!

FROM PAPER TO SCREEN...
...AND INTO YOUR PROGRAM.

POWER GRAPHICS

ACTION-TRACER + GHOST-WRITER
IMAGE TO SENSER SYSTEM PROGRAM FOR CB FILED

TWO POTENT FEATURES COMBINE TO BRING YOU UNIQUE NEW POWER OVER YOUR SPECTRUM GRAPHICS!

● ACTION-TRACER Gives you the power to transfer drawings, photographs, paintings, lettering - in fact ANY paper-based images into full colour line drawings on your Spectrum screen, with astonishing ease and an accuracy that rivals expensive digital tracers. But this little you get more than just a static on-screen design that has to be laboriously drawn on and off tape. Because

● GHOST-WRITER interprets your on-screen design into the precise sequence of BASIC instructions needed to EXACTLY reproduce it, and then writes the program for you directly into memory! New program lines appear - as you watch which are unrecognisable from ones you might have written yourself! When you're finished, POWER GRAPHICS will self-destruct, leaving behind only your new program lines ready to use.

● TOGETHER THEY'RE DYNAMIC! The new program captures your design, giving you instantly the power to MOVE it anywhere, to SHRINK it down to a single pixel or EXPAND it to fill the screen. You can SQUEEZE or STRETCH it into weird distortions, flip it UPSIDE DOWN or MIRROR-IMAGE it, ROTATE it in the plane of the screen - or other words MANIPULATE it UNDER YOUR FULL CONTROL!

Once GHOST-WRITER has captured Space Shuttle, you can immediately reproduce it anywhere any size, AND redesign it too!

No problem producing mirror-images and turning them upside-down as just as easy too!

Drawing a simple cross-section (above left) and rotating it through the plane of the screen to produce weird or exciting, instantly graphics made easy as ABC is GHOST-WRITER's dynamic programming.

ANIMATION OR MANIPULATION — IT'S ALL THE SAME TO POWER GRAPHICS

Switching individual parts of a design is easy, and thanks to POWER GRAPHICS' ability to produce high-angled curves, which DRAW it as fast as shafts, even curved blades, can be animated in real-time — like the lips of this well-known newsreader (recognise her?)

FUN TO USE, SIMPLE OPERATION, POWER GRAPHICS IS AN IMPORTANT NEW TOOL FOR BEGINNERS AND ADVANCED USERS Alike. AND EXTENDS THE SPECTRUM'S POTENTIAL INTO EXCITING NEW REGIONS.

**NO EXTRA HARDWARE REQUIRED!
SPECTRUM ALL YOU NEED IS...**

Tables and equations

D.H. Cox presents two programs for trigonometric tables and quadratic equations

If you find Trig tables boring, here is a short program to bring them to life.

Our old friends sine, cosine and tangent are shown in graphical form and the correct values given below. Watch out for

the user defined graphic symbols A, B, C in lines 200, 210, 220, 290 and 320. These turn into sin, cos and tan once the program has been run.

You can input any angle in degrees or

any of the inverse functions ASN, ACS, ATN to obtain the appropriate answers and picture.

Quadratic Equation

This quick program will draw you a parabola from a quadratic equation of your own choice. Simply input values A, B and C and presto, there's your curve.

The values of A, B and C may then be re-entered and further curves drawn which enables the different affects of these constants to be observed.

Heads will roll

C R McGinley demonstrates how a machine code routine can stop headings scrolling off the screen

The auto scroll on the Dragon can be a bit of a problem when using *List* type displays: ie. any headings scroll off as well. This machine code routine scrolls the screen, but leaves the top two lines of the screen alone.

It works by loading locations \$167-\$169 with a *Jump* to the routine. These locations usually hold a 'return' being the location that the print routine jumps to after inputting a character.

The assembly language listing with

notes explains the routine. Some points of interest are:

- (1) *PSHS A,X,Y*, needed to save the original condition of the registers to be used as the routine is reached by a *JMP*, and not a *JSR*, that does not save the registers.
- (2) Location \$88 holds the next address for screen output.
- (3) If scroll is needed, location \$88 has to be loaded with the start of the second line last line to stop printing on the bottom line

and therefore auto scrolling.

(4) *PULS A,X,Y,PC* restores the registers used to their original state.

(5) No *RTS* is needed, as the program counter is pulled off the stack with the registers. The basic loader and demo program loads the code and executes it. It then goes into a demo program. Pressing the *1* key scrolls the screen, releasing it stops the scroll.

(6) *Clear* will still clear the whole screen.

(7) You can print to the top two lines using *Print @* or after a *Clear*.

(8) *Poke & H167 & H39* stops operation of routine. *Poke & H167, & H7E* starts it again.

Once executed this routine works automatically and does not need to be executed every time you print to the screen.

GEM SOFTWARE

for LYNX, DRAGON, SPECTRUM
and ZX81 Software

SULTAN'S MAZE by Christopher Hunt. Enter the 3D Maze in search of the Sultan's jewels, but beware: your strength may run out, or you may come face to face with the Mad Guardian! A most difficult game with fantastic graphics and sound. Price (LYNX & DRAGON) £7.95.

MONSTER MINE by W. E. MacGowan. Escape from the mine with as much money as you can, but don't get clotted in or caught by the crawling monsters. An addictive machine code game, with superb graphics and save facility. Price (LYNX & DRAGON) £7.95. Price (SPECTRUM & ZX81) £4.95.

GOLF by Pete Allen. An excellent basic program, giving you an 18-hole course, with handicaps and choice of clubs. A young beginner must be specified. Amazing graphics and sound! Price (LYNX & DRAGON) £7.95.

CHATEAU by Pete Allen. A new type adventure in which you must wander the Count's old mansion in search of treasure! Of course, when the Count finds his treasure, then did he left lots of unexplained suspects for those brave enough to try and take out his riches! Come back to take a in Count's and Grand, Vampires and Trolls, do you run or hide? Will the mysterious Travel Agent suddenly appear and whisk you away to far off places? Where can you find the key or the lamp? Is the clock booty trapped? Will you die a cold and lonely death, or will you win through to claim the splendid treasure of The Chateau? Price (DRAGON) £7.95.

GAMES PACK II by Christopher Hunt.

REVERSI. Put your wits against the Lynx with this easy to learn, yet extremely demanding board game. Five skill levels, from novice to grand master.

SNAKE. Guide the snake as the food, but watch out, but watch out, and must not eat the wall or himself.

POUNCE. An excellent interpretation of a favourite card game in full colour with sound. Lynx is a main feature. Price (LYNX) £7.95.

GEMPACK III by W. E. MacGowan. Two great machine code games, with full colour graphics. In **See Harrier** you must find your prize on the ancient carrier, after dispersing the clouds with chemical bombs, but don't hit the ship! In **Sub Chase** you must dash through the sea with without being hit. Both with four levels of play from easy to harrierize. Price (LYNX & DRAGON) £7.95.

DYNAMIC GAMES FOR YOUR TI 99/4A

A GREAT BOOK OF 29 GAMES TO HELP YOU MAKE THE MOST OF YOUR TI 99/4A

Now you can turn your TI 99/4A

into a great games machine, and

make it perform just as you hoped

it would when you first bought it!

The games in this 160-page book

include MISSION VENUS, SUBMARINE

COMMANDER, CHECKERS, ALIEN ENCOUNTER,

ASTORNIA, AIR RAID, REVERSI/OTHELLO, SPACE

SURVIVAL, LIFE, SPACE RACE and STAR PATROL.

DYNAMIC GAMES FOR YOUR TI 99/4A was written

by 17-year-old Scott Vincent, one of the UK's most

outstanding young games programmers.

The book is available from book and computer stores

PROGRAMMING AIDS AND LANGUAGES FROM

Audiogenic

FOR COMMODORE VIC-20 AND 64!

VP052 BUTI PLUS - £39.95 Basic Programming Aid Commands PLUS Machine Code Monitor PLUS 3K Expansion! Basic aids include APPEND, AUTO, DELETE, DUMP, EDIT, FIND, HELP, RENUMBER, REPEAT, STEP, TRACE, UNNEW, VIC, and DECIPHER. Monitor Commands: ASSEMBLE, DISASSEMBLE, CENTRONICS, FILL, GO, MEMORY, HUNT, REGISTER, PRINTED, DISASSEMBLE, LOAD, QUICK, EXECUTE, WALK CODE, SAVE, TRANSFER, EXIT.

VP074 MONITOR VIC - £19.95 Monitor on its own. Commands as above.

£5074 MONITOR 64 - £29.95 64 version. Commands as above.

VP078 MIKRO ASSEMBLER - £48.95 Cartridge Assembler program for the VIC. Includes 3K extra memory. Write your machine language source code on Basic lines which can be manipulated using the included toolkit commands. MIKRO uses standard MOS mnemonics and features ASSEMBLER and DISASSEMBLER, plus TIM monitor commands, and special features, sound, and joystick extensions.

£5076 FORTH 64 - £29.95 Audiogenic Forth is very fast because it compiles right down to machine code, and very compact because it uses special screen compression routines. Audiogenic Forth contains a dictionary of over 200 Forth words, but the great thing about Forth is that you can define your own commands! Audiogenic Forth gives you full error messages (instead of codes), a full scrolling screen editor, and a comprehensive manual.

VP076 FORTH VIC - £24.95 As above, but includes user-def. VIC colour and sound commands. This version must be used in a mother board with 8K+ expansion.

VP076/M FORTH VIC (with memory) - £39.95
As VP076 but includes 3K expansion built-in so that you don't need a motherboard and expansion.

Michael Batty explains sorting procedures in the second of a three part series

Last week we presented a program to draw perspective views of a house. The program transformed the original 3-dimensional object to a 2-dimensional screen image which, although useful for exploring the geometry of perspective, produced rather unrealistic pictures. Each plane of the object was plotted without eliminating lines which lay behind its visible surfaces and thus the effect of depth created by the perspective was confused.

Removing hidden lines is a major problem in computer graphics, but it is made considerably easier where such lines can be covered up by 'painting' the object with blocks of colour. Here we will show such a technique which uses one of the classic sorting procedures of computer programming.

An effective way of hiding unwanted lines involves plotting each plane of the object so that those furthest from the viewpoint are plotted first. As each plane is plotted, it is coloured in, and thus the last plane plotted will be nearest the viewpoint and will hide all the detail which is behind it.

The technique is very effective on simple objects with few plane surfaces such

as the house of last week, but it involves sorting the planes with respect to their distance from the viewpoint. Such a sorting procedure is referred to as a *depth-sort* and involves sorting so that the furthest plane is ranked first, the nearest last.

Many sorting procedures exist, but perhaps the simplest and best known which works reasonably well on a small number of elements in a pile is known as *bubblesort*. As the name suggests, elements are sorted so that the largest 'bubble' goes to the top, the next largest to the next place and so on.

The algorithm works by systematically exchanging pairs of elements which are out-of-order. When the pile is entered and two elements out-of-order encountered, these are exchanged. The search then moves back up the pile exchanging until the order is correct, and then re-enters the pile at the next lowest level, reorders those not dealt with so far. Details of one such sort are available in Roy Atherton's *Structured Programming with BBC Basic* (Ellis Horwood, 1983).

The average distances of each plane from the viewpoint are calculated, these are bubblesorted, and the object then

plotted plane by plane according to the new order. Each plane is plotted in black and its edges outlined in white. As the planes are built up, those nearer which overlap ones behind will hide the frame of the object, eventually leaving just the surfaces visible from the viewpoint. The sequence of planes plotted for the wire frame house of last week is shown in the figure.

The form of the program is based on last week's except that *Procfame* is replaced by *Procsolid* which accomplishes depth sort using *Procddepth* and *Procsort*. Two filling procedures are used to fill 4 and 8 point planes respectively using the *Plot85* fill routine, and edging each plane in white.

When you run the program, start with a view distance of about 1000, a screen distance of 500, and after each plane is plotted, press any key to continue. In this way, the picture will build up and hidden lines will be overlapped as the sequence of the adjacent figure shows.

Explore various effects by altering the parameters of the viewpoint and systematically move around and over the house. We are now in a position to use this solid object as a building block for creating something more dramatic. The obvious thing to do with a house is to generate many of them to form streets.

Next week we will conclude by showing how to do this, creating some interesting and evocative scenes

Play the numbers game

Nigel Littlewood presents a simple quiz game for the unexpanded Vic20

This is a simple number quiz for the Vic20. The user has to do is orientate the numbers one to eight in the grid displayed on the screen.

However, the numbers must be placed so that no consecutive numbers are next to each other either vertically, hori-

zontally or diagonally.

There are four possible solutions to the quiz, which the computer will test for.

Upon getting a correct solution, your number of attempts will be displayed together with the amount of time you took.

Program notes

10-30	Initialisation of variables and instructions
40-240	Displays the grid
310-416	Number entry routine and correct sequence check
462	Error display
660-635	Correct sequence display
700-710	Data statements for positioning of answers and correct number sequences

H·U·R·G

HIGH LEVEL USER FRIENDLY
REAL TIME GAMES DESIGNER

ALL YOU NEED
IS IMAGINATION

NOW...

THE GAMES YOU IMAGINE CAN BE THE GAMES YOU PLAY

DESIGN YOUR OWN COMPUTER GAMES IN MINUTES

Introducing the marvelous H.U.R.G. — The ultimate game program for people who want to really play games. With H.U.R.G. the hardest thing you will have to do is to think of a game idea, and design the characters.

HIGH LEVEL — requires no programming skills — simply design the scenes yourself, and H.U.R.G. will automatically handle the most amazing action you've ever seen. Choose any settings and play your game in outer space, a sinister cavern, or any other scene to your imagination.

USER FRIENDLY — H.U.R.G. allows you through a simple opening to follow procedures in the creation of a game that is as wild as your imagination.

REAL TIME — You can play exactly as you wish. You can play at any time — even during the hundredth anniversary of the invention of the computer. You can play at any time — you can play in any action, change the look of the character, the look of the terrain, or the viciousness. It's all up to you, and you can change the on-screen immediately.

GAME DESIGNER — H.U.R.G. enables you to design your own games. You can design your own games, or you can use the H.U.R.G. control program to design your own games.

Now you can create all the stunning arcade effects on your Spectrum that up until now have only been available to professional software houses.

BONUS

To really fire your imagination, H.U.R.G. includes three ready-to-play fast-action arcade games, created using H.U.R.G.

Design a Game
WIN
£3,000

Each month up until February 1984, three prizes will be awarded every month for the best games of the month. At the end, the best game will win a grand prize of £3,000.

YOU could be a famous game designer! Every entrant has the opportunity of being published by Melbourne House and earning royalties.

Details of the competition are available with H.U.R.G.

SOFTWARE

THE PYRAMID is an arcade style game which has a very adventurous feel to it.

The Pyramid contains 120 chambers on 15 levels. In order to get from one chamber to another you must fight off the indigenous aliens to collect an energised crystal which will neutralize the force field guarding the two exits.

The Pyramid is inhabited by a total of 60 wierd and exotic alien types, all of which are beautifully animated. You will meet a whole variety of demons, droids, insects and monsters, with a sprinkling of the more unusual, the extra-terrestrial tweezers, galactic strawberry, cosmic claw, mutant eye, plus a whole host of entities that defy rational description. You will no doubt invent your own nicknames."

You proceed to explore the Pyramid from top to bottom with the difficulty generally increasing with the depth of level. Depending on the choice of exit from each chamber you are likely to have a different game every time you play.

Apart from the challenge of trying to achieve the highest score possible the pyramid contains a number puzzle to solve. The more chambers you successfully visit the more information is gathered to enable you to discover the secret numbers of the pyramid. The puzzle won't take you a few days to solve, it will probably take you a few months.

This is 'ZIGGY'. He is shown above in his exploratory capsule and is a true representation of the on screen graphics. You have total control over his movements as you explore the many chambers of 'THE PYRAMID'.

Compatible with all leading joysticks.

ZX MICROFAIR

More Sinclair Computer games, goodies and presents than in Santa's grotto.

GREAT TWO DAY SHOW AT ALLY PALLY DECEMBER 3rd & 4th

There's more to see, more to play with, more to experiment with and more that's NEW for Sinclair Computers at the great TWO DAY ZX MICROFAIR AT ALLY PALLY.

Come along and see for yourself!
It's the BIG SHOW for ZX enthusiasts and the ideal opportunity to pick up that last-minute Christmas present!

So, whether you're looking for a Sinclair Computer, hardware, software, peripherals, books or anything that's new... there's everything from GAMES to GIZMOS at the BIG ZX MICROFAIR!
More than there is in Santa's Grotto!

SATURDAY 3rd DECEMBER and SUNDAY 4th DECEMBER 1983
ALEXANDRA PAVILION, ALEXANDRA PALACE, WOOD GREEN, LONDON W12
Open: Saturday 10am-6pm, Sunday 10.30am-4.30pm.
Advance Tickets from: Mike Johnston, 71 Park Lane, Tottenham, London N17 6HS.
Prices: Adults £1 (Kids under 14) 50p. Parties of 10 or more at 10% discount!
Please make cheques payable to ZX MICROFAIR and enclose S.A.E.

Write your own machine code adventures

Without any knowledge of machine code whatsoever

THE QUILL

THE QUILL is a major new utility written in machine code which allows even the novice programmer to produce high-speed machine code adventures of superior quality to many available at the moment without any knowledge of machine code whatsoever.

Using a menu selection system you may create well over 100 locations, describe them and connect routes between them. You may then fill them with objects and problems of your choice. Having tested your adventure you may alter and experiment with any section with the greatest of ease. A part finished adventure may be saved to tape for later completion. When you have done so **THE QUILL** will allow you to produce a copy of your adventure which will run independently of the main **QUILL** editor, so that you may give copies away to your friends.

THE QUILL is provided with a detailed tutorial manual which covers every aspect of its use in writing adventures. It is impossible to describe all the features of this amazing program in such a small space so we have produced a demonstration cassette which gives further information and an example of its use.

This demo cassette is available at £2.00, and **THE QUILL** itself at £14.95.

FOR THE 48K SPECTRUM AT £14.95

Our Software is now available from many computer shops nationwide, or direct from us by post or telephone.

WITH

GIANT'S CASTLE £5.95

by MIKE WEINICK

A Junior Graphics Adventure

Explore the castle, fight the wicked Goblins and rescue the fair Damsel to gain a gold reward!
Suitable for ages 7 to 11 (younger if assisted). Editing instructions supplied for extensive general knowledge questioning.

DRAGON STICKS

The ultimate DragonCade and legal sticks with guaranteed fun.
Barton £18.95 per pair post free

TEMPLE OF ZOREN £7.95

by MIKE WEINICK

An Intermediate Level 8 F. Adventure

Previous games didn't make it, but Terra Security rely on you to retrieve the knowledge crystals long enough to bring back the Golden Orb, a map of Zoren and a sample of the latest Zoren Laser Gun. Out fit as looking, you'll also have to solve the problem of getting off the planet!

MATHS-TREK £5.95

by ANDREW JONES

An Educational Odyssey

To link the 10 planets, you'll have to pass through the Black Holes, Asteroids and Meteor Showers, you'll have to prove that a Space Captain can handle his maths.
Eight skill levels and six branches of maths selectable. Suitable for ages 6 to 10.

Dragon Dungeon

QUALITY SOFTWARE FOR THE DRAGON 32

BUGGED! £5.95

By ANDREW JEAVONS

The Tactical Arcade Game

Wave after wave of killer BUGS, deadly BUG NESTS, crafty and homicidal INDY-BUGS and MASS MUTATION from Screen 21 onwards! Survival impossible, but can you make the BUG-BASHER HALL OF FAME? The only way to destroy the little blighters is to roll the EGGS on to them and squash 'em! On-screen Scoring, Wave Data and Lives Left. 'BE WARNED!' Intelligent manoeuvring and lightning tactical decisions: pure for more in this game than pure arcade reflexes.

TREASURE TOMBE £7.95

by MIKE WEINICK

A Post-Two Graphics Adventure

Don your chain mail and crawl down the Minotaur's 90 chamber labyrinth to search for Arthur's treasure. Wizards, Warriors, Goblins, Vampires and a host of other dungeon spawn await!

OSCAR THE OWL'S MATHS TEST £4.95

by R. WESTWOOD

Maths testing for Primary School Children. Complete the sum on Oscar's blackboard before Lerma the Lizard Caterpillar reaches his mushroom. Selectable type of sum, difficulty and timing.

THE CRYSTAL CHALICE £7.95

by MIKE WEINICK

An Advanced Level Swords and Sorcery Adventure

The Wizard vanishes the Chalice and scattered the shards to the four corners of the province Kingdom of Gwynn. Gather up and evil hope hold sway and a town upland Tangwood has overgrown the Meadowsport.

Your Quest will take you from the Black Lagoon through the dungeons of the Wizard itself to the sparkling Fountains. Brute strength and cunning will both be required.
(Disk sheet available on request.)

MIDAS MAZE £5.95

by MIKE WEINICK

A Movement Game for the Younger Player

All that glitters is not gold! Don't let the Devil's Kitchen where escape demands the solving of Power Puz, and keep your fingers crossed! MIDAS Good Fairy helps you.

CASH-FLOW £8.75

by A. B. CLARK

Money Management for Home and Small Businesses

'CATALOGUE, SORT AND MAIL £8.75
A Filing System, with Sorting and Mailing List facilities. Print out address and address label facilities.

THE MANAGER £14.95

Both of the above packages presented as a double cassette package. User-friendly Manuals provided and Menu-driven.
(Available October 1983.)

Bit by bit

Pete Gerrard guides you through the intricacies of hi-res graphics on the 64

As you know, the screen display on your Commodore 64 is 40 columns wide, and 25 rows deep. Since each character space is made up of an eight pixel by eight pixel grid, this gives a maximum resolution of (40 × 8) wide and (25 × 8) deep, or 320 by 200.

To use the high resolution screen, obviously we are going to have to manipulate every pixel on the screen, and determine whether each pixel is to be turned on or off. On this depends the colour that will be displayed at that particular pixel location.

To keep track of this requires a lot of memory: 8,000 bytes for each screen display in fact, as we have to control 320 × 200 pixels, or 64,000 of them! As there are eight bits in a byte, this gives us our figure of 8,000 bytes per screen.

Basic versus Machine Code

One drawback of using bit mapping from Basic is that everything is so slow. With nearly 8K to control, this is hardly surprising, and most of the work in bit mapping is best done from machine code. However, since delving into machine code straight away can be a little terrifying, we'll start with Basic.

What we are attempting in this article is basically to transfer an 8K section of your computer's memory directly on to the screen, thereby determining whether each bit on the screen is on or off.

Standard Bit Mapping

As with all normal character displays on the screen, standard mode trades off colour in favour of greater resolution: the full 320 by 200 in fact, but with only two colours per eight pixel by eight pixel grid. Bit map mode is turned on with the following command:

```
Poke 53265, Peek (53265) OR32
```

and turned off with:

```
Poke 53265, Peek (53265) AND223
```

Obviously we're going to have to get the information from somewhere, and for this we'll have to clear out a section of memory. The usual area used is from memory location 8192 upwards, so to clear out our 8K we must:

```
For I = 8192 To 8192 + 7999 : Poke I,0 : Next
```

Now we have to select some colours, and the colour displayed on the screen in this mode is determined not by the colour memory, but by the actual content of each screen memory location. The value Poked into a screen location produces the background colour by using the lower four bits of the value, and the pixel colour from the upper four bits. Thus each screen character space can have two colours in it, and

throughout the screen we can use any of the 16 colours.

Before printing anything on the screen, we need to tell the screen where our bit map is stored, and this is done using:

```
Poke 53272, Peek (53272) OR8
```

which puts the bit map at locations 8192 through to 16191.

If we don't tell the screen where to go though, interesting things happen! For instance, Poke 53265,59 will show the top half of the screen containing the bit map for the first 4096 memory locations, and the bottom half the bit map from the character generator area. You can actually watch it all change up at the top, as page zero continues to monitor what's happening. The following line

```
For I = 8192 To 8511 Step 8 : Poke I,255 : Next I
```

will now produce a hi-res line across the top of the screen, given that we are still looking at locations 8192 and above for our hi-res area. Or again:

```
For I = 1924 To 2023 : Poke I,4 : Next I
```

will produce a purple hi-res screen.

To determine whether any particular pixel is on or off, we will need to find it on the screen, and the following formula will show you where any pixel is located, assuming we want it to be at X location horizontally, and Y location vertically:

```
R = INT (Y/8) : find the row
C = INT (X/8) : find the character position
L = Y AND 7 : the line of that character position
B = 7 - (X AND 7) : the bit of that byte
```

Putting them all together gives us the byte where any pixel with the co-ordinates X,Y is situated:

```
Byte = 8192 + R * 320 + C * 8 + L
```

and to turn any X,Y co-ordinate bit on in that eight by eight space we:

```
Poke Byte, Peek (Byte) Or 2 to the power B
```

We will now use some of these ideas to get the 64 to draw a hi-res cos wave.

```
8 POKE 53272,PEEK (53272) OR8
9 POKE 53265,PEEK (53265) OR32
10 FOR I = 8192 TO 8192 + 7999 : POKE I,B : NEXT I
12 FOR I = 1024 TO 2023 : POKE I,I : NEXT I
15 FOR X = 0 TO 319
20 Y = INT (100 + 80 * COS (X/10))
25 C = INT (X/8) : R = INT (Y/8) : L = Y AND 7
30 BYTE = 8192 + R * 320 + B * 8 + L
40 B = 7 - (X AND 7)
50 POKE BYTE,PEEK (BYTE) OR (2 to the power B)
60 NEXT X
79 POKE 1024,16 END
```

Multi-colour Bit Mapping

This is similar to multi-colour mode in ordinary graphics, in that we are allowed to have up to four colours per eight pixel by eight pixel grid, but we have to suffer a halving of the horizontal resolution available, down to 160 by 200 pixels.

Again, we are using an 8K section of memory, and our four colours are chosen

from: screen background colour, register 53281; character screen position, where the upper four bits give us one colour, the lower four another: colour memory.

To turn multi-colour bit mapping on, we must:

```
Poke 53265, Peek (53265) OR32 : Poke 53279, Peek (53279) OR16
```

and to turn it off again:

```
Poke 53265, Peek (53265) AND223 : Poke 53279, Peek (53279) AND239
```

Moving the Screen About

It is possible to move the screen either horizontally or vertically in either direction, one pixel at a time.

The 64 normally displays a screen that is 40 columns across and 25 rows down, but in order to scroll in either direction we can change this into 38 by 24 display, in order to give the screen information somewhere to go to, and somewhere to come from.

To get the 38 column screen display, we must enter:

```
Poke 53270, Peek (53270) AND247
```

and to switch it off we must:

```
Poke 53270, Peek (53270) OR8
```

To get to a 24 row screen display, we must enter:

```
Poke 53265, Peek (53265) AND247
```

and to go back to 25 rows again:

```
Poke 53265, Peek (53265) OR8
```

You will see the screen border expand and shrink accordingly, in order to accommodate the screen manipulation. To scroll horizontally, we must:

```
Poke 53270, (Peek (53270) AND 248) + X
```

where X is the screen position from 0 to 7, and to scroll vertically:

```
Poke 53265, (Peek (53265) AND 248) + Y
```

where Y is the Y position of the screen from 0 to 7. To illustrate these features, here are a few examples.

Values in the range 24 to 31 actually control the vertical position of the characters on the screen, so,

```
For J = 24 TO 31 : Poke 53265,J : Next J
```

will set the screen moving downwards, leaving an empty space near the top. Poke 53265,27 to get back to normal.

To illustrate 24 column mode, type Poke 53265,19, which cuts the top and bottom lines in half: this is the basis of all these scrolling operations. Switch to a 24 character screen, move everything up slowly, then jump back to a 25 character screen again, and so on.

Finally, to turn the screen off completely, type Poke 53265,11. Poking 53265 with 27 always sets everything back to normal again.

Obviously there is a lot to learn and I have found the best way to understand it all is just to play around, taking notes of everything you do and the results that follow. Next week we'll take a look at the other important graphics feature of the Commodore 64 — Sprites.

SPECTRUM SOFTWARE

SUPER SOFTWARE PACK: 30 super poop puns for the 16K Spectrum — machine code speed type games, adventures, romps and droppers (making into fun games) including Breakout, Pac-Man, Frogger, Snake, Star Wars, Amazing 3D Maze, 30 Naughts and Crosses, Consider of Eggs, Trap It, Mountain and Rabbit 41 88 as one comprehensive pack. £5.95

GAMES PACK 1: Four super fast machine code action games — Spectrum guitar melody bags including the maverick and miss. Snake bits, roller eggs on a wheel, rocket but all quick as they turn out at the time the snake grows longer and moves faster. Also Sid and Breakout. 16K. £5.95

GAMES PACK 2: Two arcade type games and two games of strategy. All of the Worlds a fast turn of 20 sheets, 3 approach, 4 your planet. Each sheet will be to test and build a fully. If they are not stopped they will take out and rebuild at 100 per cent the same. And 30 Naughts and Crosses, Smiles and Sunbeams. 16K. £8.95

SPECMENOR: Puzzles at 80 best, superior most sophisticated graphics, letters, graphical art, on screen scoring, simple, available, great graphics, different levels, 80 difficulty, flash music and legs screen machine code in colour. 16K. £2.95

RAMBIT: Superior fast machine with graphics. 80 fast random head, rock-man, hedge, quail, rabbit and various, spinning, very machine code. 48K. £3.95

ALIEN WIRE: Your mission, to stretch good. Suggests. 20 your game to the enemy base, watch out for a mine, falling, no more. There are four beams to avoid. 1. The attacking your spacecraft and rock to 100% for your progress. 4 to make 80. 100% secret to discover. A great arcade adventure game with wonderful graphics. 16K. £5.95

BACKGAMMON: The computer will match the code to decide to move it, about 100 seconds. Plays according to official rules, prevents, clear to, 100% colour, high resolution board. 48K. £5.95

REVERSI: An exciting board game of strategy, which is easy to learn but hard to master. 80 you will spend the gameable. Standard game of "You Dare". Lightning Reversi. 48K. £5.95

PLAY AS YOU LEARN: Five games, party, 48K. Maths, 10 and 20, 100, 1000, 10000, and the alphabet are fun to learn with these educational games, for the 16K, 48K, 80K, 100K, 128K. £9.95

ARTY THE SPECTRUM ARTIST: 48K. A very useful, 10 in the creation of screen displays. This program — 48K, 100% 100% of painting, 100% 100% practice, 100% 100% the commands. A step-by-step, 100% 100% saved in memory, and can be printed, 100% 100% down to type for use in other programs. Or use with the help of a 100% 100% of your creator, for fun. £5.95

We're worth a visit because

- We've probably the best range of software in the North — and we're improving all the time
- We've a growing range of computers, peripherals, upgrades and books
- We've the biggest range of Citadel figures for leagues around
- We've board and adventure games for all ages from TSR, Games Workshop, Avalon Hill, Victory Games, GDW, Yaquin, etc. etc.

PROGRAMMERS — Assassin Software needs your marketable programs. Give us a call.

INTRODUCING

If you've ever been killed by the evil goblin, flamed by a dragon or turned to stone by a wizard then *Micro Adventurer* is the magazine for you. Each issue is packed with stimulating features, such as advice on how to write your own adventures, reviews of the latest games, help for those in need and adventures to type in and play.

And if you want to make the most of your Commodore computer, you need *Commodore Horizons*. Each issue features competitions with £200 in prizes, pages of program listings, in-depth hardware evaluations and reviews of the latest software.

Micro Adventurer will be launched in October, followed by *Commodore Horizons* in November. And you can get your first copy free by subscribing now. For only £10, 13 issues of either magazine will be mailed to you direct — the normal rate is £10 for a year's subscription (12 issues).

OUT NOW!

1ST ISSUE ON SALE NOVEMBER 10th!

Fill in this form and send it to **Micro Adventurer**,
Subscription Department, 12/13 Little Newport Street,
London WC2R 3LD — along with a cheque or postal
order made payable to **Micro Adventurer**. The special UK
subscription rate is £10 for 13 issues, overseas it is £16.

OPEN FORUM

Percentage Rate

on Dragon

When a sum of money (PV) is repaid by a monthly instalment of P, at monthly interest *i*, the variables are related like this:

$$P = PV \frac{i}{1 - (1+i)^{-N}}$$

If all these are known except the interest rate, you cannot rearrange the equation so that the unknown, *i*, appears on one side only. The program finds the equivalent annual rate by trial and error. Readers with a building society mortgage will know that societies have an idiosyncratic way of

applying their notional rate. It is interesting to see what your 'true' mortgage rate is!

Program notes

- 50 Sets a starting point for annual rate and trial difference.
- 60-99 Coverts APR into monthly (decimal) rate.
- 100-130 Test the expression against the known value in P and adjust rate accordingly.

Refraction

on Spectrum

Andrew Thompson's program for the re-

fraction of light (PCW 30 June - 8 July) inspired this program. This particular version draws the interface between the two media (lines 210 and 220), the normal to the surface (lines 230 to 250), the incident ray (lines 260 and 270), the refracted ray

(lines 280 and 290), marks them in with arcs (lines 300 to 330) and labels them (lines 340 and 350).

It is a simple matter to colour the different rays in order to make them easily distinguishable.

HISOFT PASCAL DEV PAC

Quality ZX SPECTRUM Software

HISOFT PASCAL 4T

I haven't seen any other compiler that could match Hisoft's Pascal using the Spectrum Micro - Autumn 1982
 This is a very impressive product - a benefit to any Spectrum programmer - David Bolton ZX COMPUTING Aug Sept 1983

Just two comments from full length reviews in our powerful and instantly fun implementation of Standard Pascal. The advantages of using Pascal are well known - fast, self-documenting and above all structured programs and now with HiSoft Pascal you can reap all these benefits on a wide range of home computers including the 48k Sinclair Spectrum. HiSoft Pascal produces programs that run typically 40 times faster than equivalent ZX BASIC programs and sometimes up to 1,000 times faster!

HiSoft Pascal supports FOR DO WHILE DO REPEAT UNTIL CASE OF INTEGERS REALS CHARACTER RECORDS POINTERS SETS ARRAYS etc. etc. - if it's not in Tiny Pascal it's a virtually full implementation of the language allowing the user to develop true high-level language skills while obtaining execution speed close to that of machine code. Compatible with a 70-page manual.

HISOFT DEV PAC 3

DEV PAC is most highly recommended. The documentation is first class - your Computer May 1982
 if you write programs in machine code, buy DEV PAC - it's the best currently on the market - Adam Darting ZX SOFT in Which Micro September 1983

Two comments from reviews of earlier versions of DEV PAC - now we have DEV PAC 3 available - a powerful 280 assembler with complete assembly assembly from tape into executable generation of various code files: ORG EQU DEFBS DEFBS DEFWM DEFWM etc. of any length - in fact all you need for 1M (3,000 lines per minute) and powerful assembly programming. But - don't stop there - DEV PAC 3 also includes an incredible debugger - this debugger gives you a "run" rather than a "step" system, including extensive debugging of your machine-code program, including single-stepping programs EVEN IN ROM! Open up the secrets of low level programming with DEV PAC 3.

Pascal
 HiSoft Pascal 4T (ZX SPECTRUM) £25 inclusive
 (NewBrain, SHARP MZ700 etc) £35 plus VAT
 HiSoft DEV PAC 3 (ZX SPECTRUM) £14 inclusive
 (NewBrain £25 inclusive)

• • • **STOP PRESS** • • • HiSoft Pascal for the SPECTRUM now comes complete with a further Graphics package allowing fast and easy production of complex graphic displays.

WIN THE POOLS?

48k

SPECTADRAW 2 - THE BEST SELLING POOLS PREDICTION PROGRAM FOR THE 48K ZX SPECTRUM

The program looks at the recent form of the teams playing in each week's English and Scottish football league matches and then refers to a large database to see what has happened in the past when teams with similar form met. By combining the lessons learnt from the past with the teams' current league position, the program generates a draw probability factor for each match. It can then identify the matches which are likely to yield draws and output suitable predictions. It will also output the least likely draws for the benefit of those who prefer the fixed odds lines on coupons.

Program, 8000 match database (both on high quality cassette) and instruction manual £12.95 inclusive.

NEW!!! SPECTASORT - THE PERM GENERATION PROGRAM

Spectasort takes the 14 most likely and 10 least likely draw predictions and produces ten 8 from 10 full cover perms, enabling you to complete your pools coupon directly from the screen. The program will run on its own in 16k, using your own predictions, or has the unique feature of being able to merge with SPECTADRAW 2 to provide a complete Pools Prediction package!!

Spectasort program on high quality cassette £4.95 inclusive.
 (Cheques/POs payable to B.S. McAlley)

Snake

on Lynx

Snake is a two player game written for the Lynx. The instructions are included in the program. Note that if you reverse direction, doubling back on yourself, then you hit your own tail and lose the round. The scoring system is such that the less points

you have, the better. The number of points gained depends on the time taken to crash into something, so the sooner you can force your opponent to crash, the more points you gain.

If you wish to move diagonally, then press and hold down two keys together. This works because the program reads the keyboard by means of the *Inp* function, as *KeyN* and *KeyS* do not allow multiple

key presses to be detected.

The procedure which is probably of most interest to users is *Proc point*. It finds the colour of the point with co-ordinates (x, y) and returns this value in variable c.

It works by calling *From* routines to read the three colour banks comprising the screens memory, and combining the contents of these banks to obtain the colour number.

PROGRAM OF THE WEEK

Snake
by Chris Cytera

Wheeler Dealer

£6.50 (including VAT and postage), on cassette for the BBC II 1.2 o/s.

A captivating game emulating the real business world. As boss of a small manufacturing company, you are required to make executive decisions to enable your company to survive and even prosper in the face of strong competition. The game is dynamic: the more your skills improve, the greater the competition becomes. 10 levels of difficulty exist, ranging from novice at level 1 to multi-mega expert at level 9.

No responsibility will be accepted by OIC Ltd if health arises due to lack of sleep caused by addiction to our products

Games for brains

Decay

on Spectrum

This program will demonstrate radioactive decay and was written by me in conjunction with a physics 'A' level syllabus. The program can be run on any ZX Spectrum (either 16 or 48K) and will produce a table of results either on a ZX printer or on the screen.

Satellites

Each time I sit down to write this column, I think of some new computer application in the field of radio. There are so many, from electronic design to keeping QSL records — the card a station sends you to acknowledge your contact. Even big stations like local radio or the BBC will send you a card if you let them know when and where you heard them. This week though, I promised to talk about satellites — tracking them is one of the most in-

teresting microcomputer applications I can think of.

So what is a satellite? Well, the moon is a satellite and to many amateurs, is an important means of communication. The EME or Earth Moon Earth system involves bouncing signals off the moon in the hope they will reach some exotic location.

We can track the moon quite easily, at most times it can be easily seen. It is with the man-made satellites that a computer can help most. The latest of these, OSCAR 10, was launched only a month or two ago. OSCAR stands for Orbiting Satellite Carrying Amateur Radio, but these are not the only kind whizzing around. There are weather satellites, military satellites and even one called UOSAT (OSCAR 9) featured in PCW. 21-27 April, and in the care of the Universi-

ty of Surrey UOSAT is of particular interest since it transmits data, both pictures of the Earth's surface in a form that can be displayed on an ordinary TV, and speech from a voice synthesiser that can be heard with a VHF receiver. I have found it several times myself — a disembodied voice from space.

So how do we use a computer to find a satellite Well, without a computer you must look up tables and work it out with a great deal of mathematical effort. By the time you've worked out its position it's moved and you have to start again.

At this point I must mention AMSAT UK. This is the UK version of the Amateur Satellite Organisation and they publish a marvellous book called *Satellite Tracking Software for the Radio Amateur*. The

book consists of listings, applicable to most macros, to track most satellites. It costs less than £5 and is available from: AMSAT UK, 94 Herongate Road, Wanstead Park, London E12 5EQ. AMSAT will also supply newsletters and information for the cost of membership which is currently £6.

Not much space to continue this week so keep your letters coming and if you have any ideas relevant to the column, or listings, then let me know. Views on commercial software packages for microradio would also be interesting.

Ray Berry GW6 33N

This series of articles is designed for radio and microcomputer enthusiasts. If you have any queries that you want answered, hints and tips to share or topics that you would like to see covered, write to: Ray Berry, Microradio, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

NOW AVAILABLE FROM W.H. SMITH

SUPER SPY

48K Spectrum

Locate the secret island hideaway of the mysterious meglomaniac Dr. Death. Follow his trail across continents, through complex puzzles, coded messages and 3-D mazes. Discover the entrance to his underground lair — but beware — even with your death-defying gadgets his evil henchmen may still win the day!

Saving the world may take some time — so we've included a 'save' routine for part-time secret agents!

Tony Bridge's Adventure Corner

Adventure Int.

Back in 1978, microcomputing was an expensive hobby, and the devotees a small band. One of them worked at a Florida firm called Stromberg-Carlson, making telephone digital switches. Like many other people surrounded by large mainframe computers, he counted the hours until he could get down to some serious after-hours games-playing.

He discovered Adventure, the classic game by Willie Crowther and Don Woods. Intrigued by the unique blend of fantasy and logic, he wanted to share his delight with his friends — but they, of course, were not allowed near the sacrosanct machines.

Back home, therefore, the intrepid Adventurer sat down at his TRS-80 and translated the mainframe program to the micro, via an Interpreter program that he wrote for the task.

His wife, meanwhile, was extremely fed up with the late nights, the long hours at work, and the early mornings spent hunched in front of the TRS-80. Grabbing the disk of the newly-written Adventure, she threw it in the oven.

Fortunately for the rest of us, she had forgotten to switch it on — and the couple are now several million dollars better off as a result!

The wife was Alexis Adams, her husband was Scott, and the program was *Adventureland*.

The first cassettes were mailed out in the Adams baby's bottle-liners — the quantities at first did not warrant special packaging, and manufacturers were not interested in the small numbers. This state of affairs, of course, did not last long! Soon, Scott Adams Computers opened the first shop in their retail chain, which is now known as Adventure International.

Alexis Adams far from remaining anti-Adventure, actually went on to write, in part, the second program, *Pirate Adventure* and most of the succeeding *Mystery Fun House* and *Voodoo Castle*.

Mrs Adams is not a programmer, and it was only possible for her to accomplish this with the aid of Scott's interpreter, which is at the core of AI's success. This program is a skeleton structure, which is fleshed out with the details of the individual Adventure. Information on rooms, including the text, together with objects, exits and riddles, is fed into the main program, and what emerges is the full-blown Adventure. This is how many of the larger software houses write a series of Adventures.

Back in Florida at the end of the 70s, the Adams series was translated to the Apple, a trend that has persisted to this day. Now the series is available for the Commodore machines as well as the Alan and the original Tandy and Apples.

No word yet of versions for some of the other popular micros, but AI surely cannot wait around much longer — they will be assured of a thousand-fold increase in sales, in the UK at least!

AI have not stood still on home ground, however. There are now several divisions, which include mail order, retail and business software, as well as the Expo Division, which organises computer fairs. The staff of AI is presided over by Alexis, who has become Alexis Adams Inc.!

Adams himself, apparently still loves Adventure, and his personal favourites are *The Count* and *Mystery Fun House* — which are yours?

Scott Adams has brought joy to many thousands of Adventure enthusiasts with his programs, which he describes as fantasy computer novels, in which the player controls the development of events. Long may he continue to delight and frustrate us!

Alan Hunt has recommended several Adventures for the Vic20 that he has played and enjoyed. First of all, the *Mysterious Adventure* series, from Leisuresoft. The titles include *The Golden Balan*, *The Time Machine* and *Arrow of Death* (Parts 1 and 2). These are advertised by Leisuresoft, and also by Digital Fantasy — I imagine that they are the same programs!

Alan reckons that *Time Machine* is the best that he has tried so far. The series, which was written originally for the TRS-80 and Video Genie, has been added to recently with the release of *Escape From Pulsar 7*, *Circus* and *The Feasibility Experiment*.

Another Adventure that Alan has tried, and seems to like, is *Rescue From Castle Dread*, from Terminal Software (I hope the name is not taken too literally!), and one of three Adventures from them.

This one must be written in Basic, as Alan has been able to alter the program to correct a small bug near the end — but he reckons that all these programs are good value for the Vic20.

Finally, this week, *The Hobbit* Hall of Fame.

- 1 Steve Howard.
- 2 Robert Woods who agrees with other people that this is the best Adventure yet — this is not one of the world's best-kept secrets, Robert!
- 3 Richard Bourne who is also having trouble with the rope in *Planet of Death* — at the start, Richard, you should find a sharp lint. Try using that, it may help!

Not too many names this week, but with the recent release of *The Hobbit* for the Oric-1, Commodore 64, and BBC machines, I'm looking forward to getting a flood of names shortly to add to the HHOF — although I'm sure that many people will be asking about the Goblin's Dungeon! Just remember, a friend in need...

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further, write to Tony Bridge, Adventure Corner, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

Are you stuck in an adventure? Are you faced by a problem that seems insurmountable? *Adventure Helpline* may be the answer.

Adventure Helpline is, quite simply designed to put adventurers in touch with one another. Where you may be stumped by a baffling puzzle, a fellow adventurer may be able to help. By the same token, you may be able to help other people with their problems.

If you are having difficulties with an adventure, fill in the accompanying coupon and send it to:

Adventure Helpline
Popular Computing Weekly
12-13 Little Newport Street
London WC2R 3LD

We shall publish *Adventure Helpline* entries each week in their own special column.

Adventure Helpline

LEAVE THIS EARTH A LITTLE
WHILE
AND PLAY FOR
OTHER

PLANETS

WHO SAID "A WEEK IN POLITICS IS A MONTH IN PANTOON"?
(SUMMING RINGS HEER, SUGARLY...)

OH NO! NOT THAT! YAH - HISS - BOO!

BUT WAIT ...

BONUS PLANETS - PENALTIES - DECLARATIONS

THE DEALER IS PROGRAMMED NOT TO CHEAT
THE PUCK IS ACTUALLY SHUFFLED
THE CARDS ARE NOT DEALT AT RANDOM

PLAY
FOR
PLANETS!

Many other features which transform an ancient game into a 21st century pastime include playing within strict (are they strict?) time limits, no need to use a magnifying glass in order to recognise the cards, 10-point menu (with spinner) - The Apple Dumping's don't a bank, winners table, one earth park, alternative pick, dealer's comments, on-screen scoring, graphics, excruciating music, and so on and so forth - combined with regular pantoon features like bet, buy, twist, show, stand, fold, shuffle, bluff, pantoon, 10 royal 5 cards, pay routines, advantage dealer etc. - make this the most up to date and probably the most realistic version on the market. Strictly speaking, pantoon is for 2 or more players, but one can play. Because of the nature of this program, the degree of skill required may be altered thru various levels of play, and up to 4 players may take part against a very clever dealer with a big challenge up. Ah, vevee.

ADS THE ULTIMATE IN PERIPHERALS FOR THE SPECTRUM, JUPITER ACE & BBC MICROCOMPUTERS

"Highest quality peripherals at the lowest possible prices" - that's the philosophy at Advanced Digital Systems. Our team of highly experienced designers use the very latest techniques to produce adaptable, reliable computer peripherals - at a price you can afford.

- Boards are designed using CAD/CAM, giving a neat, professional layout
- Gold plated connectors are used, wherever possible, to ensure good electrical contact
- All products carry a 12 month guarantee
- All units are "Plug & go"

PRINTER INTERFACE 1

Centronics Interface for the Sinclair Spectrum. £34.50 inc. VAT. Comes complete with approx 1 metre of cable, centronics plug and software.

- Software recognises LLIST and LPRINT enabling Print outs direct from Basic
- Also adaptable COPY routine for graphics printers
- Completely adaptable to 3 different micros the Spectrum, ZX81 (write for details) and Jupiter Ace.
- Units are housed in custom designed black ABS Cases

PRINTER INTERFACE 2

Centronics Interface for Jupiter Ace. £39.95 including VAT and Software. Same unit as the Spectrum interface but with adapter card

Advanced Digital Systems Ltd.

Manufacturers and Designers of Microcomputer Peripherals
9 Bonchurch Road, PORTSMOUTH, Hampshire PO4 8RY. Telephone (0706) 823825
For International enquiries (0706) 823061.

PERIPHERAL INTERFACE 3 - ZX ACE Package
Using the adapter card and the Software supplied, the Sinclair ZX Printer can be connected to the Jupiter Ace.

Special Introductory Offer £39.95 inc VAT

- Two versions of the driver software included.
- One will run on unexpanded ACE, but will not deal with graphics or user defined graphics.
- The other will run on expanded ACE and deal with all characters.

PERIPHERAL INTERFACE 4

ZX BBC Adapter

Enables the connection of Sinclair Peripherals to the BBC Model B

First Software package included gives an amazingly cheap entry into printing on the BBC model B by allowing you to use the ZX Printer - ideal Bill listings

PERIPHERAL INTERFACE 5

ZX Onic Adapter

Ring or write for details. Same as PI 4 but for the Onic Microcomputer

-
- Please send me the items as ticked
I enclose cheque/order for Total

BREAK DISABLE

E A Duncan-Dunlop, of Dany-Lan, Aberkonnig, at Bridgend, writes:

Q I wish to disable the Break key on my Spectrum. I thought I could do it if I Load — Ld A,9 Ld 1,A,1M2 and then move the interrupt up to 65129, where I might convert the key press so that it would be ignored if I pressed Break. But this does not work. Which part of the system tests for Break?

A A good guess, but in some routines the Break key is accessed directly and not via an interrupt. In routines such as Save, Load and Print this is so; of course if you are not using the keyboard scan you are going to get nowhere by moving the interrupt. Only if you are using Input and Inkey can you disable the Break key in the way you describe.

PLUGGED PRINTER

Andrew Bell of Faywood Road, Thornton, Cleveleys, writes:

Q I own a 16K Spectrum, and have recently bought a printer. I would like to leave my printer plugged in all the time, but when I Load some games which auto-Run, the printer prints out the screen display. Could you please tell me why this happens, and how I can prevent it?

A I doubt that you can prevent it. If you do not want to un-plug the printer then you might have to resort to taking out the paper carrier, so there is nothing for it to print on.

I doubt whether the prob-

lem is as simple as the software house leaving a Copy command in the program, it is far more likely that for some reason they have diverted channel #3. This channel is used for such things as Lprint and Llist

SPECTRUM JOYSTICK

Michael Hart of Broadway, Dunscoff, Doncaster, South Yorkshire, writes:

Q I am taking an O-Level technology course, and as a project I am building a programmable joystick interface for my 48K Spectrum.

My problem is this — how can I use the port at the rear to send information into the keyboard buffer so as to simulate a key being pressed? I cannot make head or tail of the diagram in the manual, or understand how the keyboard buffer is used.

A The Spectrum does not have a keyboard buffer. A key is 'pressed' or read by the computer when both the data line and the address line return the value of 0. The Spectrum has 40 keys, which are read by five data lines and eight address lines. These form a grid, so that any key can only have one way of returning the value 0 along address and data lines.

If you want to access this from the port you will have to use Port F1. Only if you input here will the keyboard scan be accessible. The address lines you need to deal with are A15 to A8, and the data lines from D0 to D4. To simulate a key press you will have to put a value of 0 on the appropriate data and address lines.

ACOUSTIC MODEM

Bruce Whitfield of Oldfield Park, Westbury, Wiltshire, writes:

Q I own a Vic20 and I am thinking of buying an acoustic modem for it. Will I need to buy a special port, as the user port on the Vic includes an RS232, which seems to be usable with any modem. How much will it cost in extra phone bills? Will I be able to dial any computer bulletin board in the UK, and will the

software be included with my modem to do this?

A The Vic interface is an RS232, but not an RS232C. The RS232 on the Vic can only deal with 0V to 5V, a modem needs a range from negative voltage up to +12V. While the one on the Vic can handle TTL chips, a full 12V will be a two and a half times increase on its maximum rating — the result might be burnt-out chips. You would therefore need a full RS232C if you want to use a modem with your Vic.

If you did have a modem then in theory you would be able to access any computer in the UK. However, in practice the amount of information you would need in terms of phone numbers, passwords, etc. would make it very difficult to enter more than a handful of bulletin boards.

COPY COMMAND

Phillip Adcock of Penn House, East Hamling, Norwich, Norfolk, writes:

Q I own a BBC Model 'B' 1.20N and have a word-weigher chip. I find it easy enough to Print using control B and C, to get listings. But after coming from a ZX81, I find I miss an equivalent to the ZX81's Copy command. Is there a way round this? I have an Epson Dot Matrix printer, an FX80.

And J Rumble of Longmeadows, Frimley, Surrey, writes:

I own a BBC 'B' and a Centronics 739 parallel printer, can you tell me where I can get hold of a screen dump? All the ones I have seen are for Epsoms. Does nobody own a Centronics?

A The Sinclair Copy command is very useful but is only made possible because of the dedicated printer, and special control lines. You will need a conventional screen dump routine for this. Fortunately, there is an article on

the Epson in the June '83 edition of *Laserbug* which has various demonstration programs, including a screen dump.

You might also be interested, that because of mistakes in the manuals, Epson has published an errata sheet, which is available if you send an SAE to them. The leaflet has a lot of information directed especially at the BBC user.

As for the Centronics — there are other people who use a Centronics printer with their BBC, and it is the same issue of *Laserbug* to the rescue. There is a Centronics screen dump on page 20.

FULL SPACEBAR

D J Ridell of Caulker Bush, Southwick, Dumfries DG2, writes:

Q I have a 48K Spectrum and wish to get a full keyboard with a spacebar for it. Could you tell me who makes one? Also will the Interface 1 for the microdrive be incompatible with such a keyboard?

A I know of two keyboards with a full space bar, the Fuller FDS and the Fox keyboard. Both require you to remove the Spectrum circuit board from the existing case and fix it inside the new keyboard. This means that you will not be able to connect Interface 1.

None of the other solutions are ideal. Fuller can provide a buffer extension for their keyboard at extra cost, alternatively, you could buy the Maplin ZX81 keyboard and fix different legends to the keys (DK'Tronics might sell you some) since this one is connected to the computer by a ribbon cable.

In short, exactly what you require is not yet available, but I cannot see such an obvious gap in the market remaining unfilled for long.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem Peek it to Ian Beardsmore and every week he will Poke back as many answers as he can. The address is Peek & Poke, PCW, 12-13 Little Newport Street, London WC2R 3LD.

NEW RELEASES

FORCE FIELD

Silversoft have just released four new titles, their first new ones in quite a while. All are for the Spectrum and are a mixture of 'shoot 'em up' and maze-style games.

Mission Impossible is a variant of *Lunar Lander* where you must move your spaceship through various asteroid belts to a safe landing and then blast your way back to the mother ship.

Things become difficult after the first couple of successes by the addition of a force field which you must blast through within a few seconds in order to escape.

The game is fairly addictive and perhaps that's what really matters; graphically, though, it is not up to the standard of the recent QuickSilva releases or *Ultimate Play the Game*.

Program *Mission Impossible*
Price £5.95
Micro Spectrum 16/48K
Supplier Silversoft
271/273 Kings Street
Hammersmith

DEADLY SPIT

No prizes for guessing what *Metagalactic Llamas Battle at the Edge of Time* comes from.

The proud llama has achieved its pre-eminence via Jeff Minter's other Vic20 games, *Metagalactic* (I'm not repeating the whole title again) continues the proud tradition.

Highly evolved llamas are used to defend the last outposts of earth. Using your joystick you must move your

llama and make it spit. The spit is deadly and must be bounced around the screen into the vicious arachnid mutants who will otherwise quickly evolve into even more deadly Weevilioids.

Program *Metagalactic Llamas Battle at the Edge of Time*
Price £5.50
Micro Vic20
Supplier Llamasoft Software
49 Mount Pleasant

Hants

DEACTIVATE

Alice in Wunderlab is an adventure game for the Commodore 64. The game pits you against a nuclear reactor which is melting down - a clock on the screen ticks away the seconds.

Your task is to deactivate the reactor. This involves finding your way around the power plant and solving various problems, like a drunken professor, before time runs out and you (and countless thousands more) are blown to bits.

There are three skill levels depending on how much of your lifetime you are prepared to spend on the game. The simplest level takes at least three hours.

BUG-EYED

Fantasy Software, which is the new guise of Quest Microsystems has launched its first program - *The Pyramid*.

As Quest, the programmers built up a good reputation with arcade-style games like *Black Hole* and *Violent Universe*.

With *The Pyramid*, all the classic arcade features are retained, with at least the veneer of classic adventure themes.

A (highly simplified) version of the (highly ridiculous) plot is that you must fight your way through the 120 chambers of a mysterious pyramid.

Each chamber is guarded by various kinds of alien from the fairly conventional bug-eyed monsters, to more arcane types like galactic tweezers.

To escape each chamber, you must survive long enough to collect an energised crystal and repeatedly drop it through the exit force fields, until they become deactivated.

As you pass through more and more chambers, so you will accumulate numbers which are revealed (almost) every time you leave a chamber. The numbers will form the basis of a competition to be announced later.

LAP RECORD

Chequered Flag is the latest game to come from the Psion/Sinclair partnership.

A sort of ground-based *Flight Simulation*, it has the impressive graphics we've come to expect, with a smooth scrolling race track complete with trees and lamp-posts.

You can choose from a range of circuits and car types as you try to beat the lap record. Hazards include oil and water spillages which can cause you to spin off the track.

The only regret must be there are no other cars on the road to compete with - perhaps it was a problem of memory restrictions - but quite enthralling, nonetheless.

Program *Chequered Flag*
Price £6.95
Micro Spectrum 48K

Surrey GU15 3PS

GURU

The big problem with running adventure games on the Vic is memory, most of the really compulsive games need at least 16K.

Romik have, however, managed to fit their range of text adventures into only 3K additional memory expansion.

The Sword of Hrakel appears to have all the classic ingredients - country under a curse which only you can lift, spells, sorcery, and mysteriously an enigmatic meditating guru in a dark gloomy forest.

Program *Sword of Hrakel*
Price £5.95
Micro Vic20
Supplier Romik Software

Slough SL1 1PT

MUSHROOM

Caterpillar, sometimes known as *Snake*, has been around for a very long time and several versions of it have been printed in this magazine, amongst others.

Although addictive, the game is so simple in essence, that anyone trying to sell one had better ensure it is a cut above the rest.

The game involves moving a caterpillar around a garden eating food. As it eats it gets bigger - this is a problem, because the caterpillar must also avoid poisonous mushrooms that gradually fill the screen.

Gemini has a version of the game for the BBC B that retains the original scenario, but adds to it in the form of another snake which must also be avoided.

Program *Caterpillar*

NEW RELEASES

GOTHIC HORROR

ANT ATTACK SOFTBOLD 3D FROM QUICKSILVA

Battle the Ants in the Walled city of Antscher, it says on the box of Quicksilva's *Ant Attack* — they're not kidding.

Escher's nightmarish world of geometrical impossibilities coupled with monumental Gothic edifices is faithfully reproduced in *Ant Attack*.

The program gives you a three-dimensional view of the walled city — all grey walls and crenelations, and you can

change your viewpoint on the city, as though switching from one monitor to another, by simply pressing a key.

Forbidding as the city sounds, you must enter it to rescue a member of the opposite sex who has foolishly got her/his self trapped there (you can choose the sex of the victim!).

The ants will try to stop you of course — a few of their bites and that's it. An excellent piece of visually stunning Gothic horror from a company whose Spectrum programs seem to be getting better and better.

Program *Ant Attack*
Price £6.95
Micro Spectrum 48K
Supplier Quicksilva
Palmerston Park House

Southampton SO1 1LL

X-WORD

Crossword Puzzler is a program which generates crossword puzzles. It is divided into two sections: *Xword-Gen*, which builds up a datafile of

the words you have chosen and their positions, and *Word-Play*, which uses the data file you have created to create the actual crossword.

The program, designed for the BBC B, comes with a manual and three sample puzzles, including one based on the first crossword puzzle ever designed.

Program *Crossword Puzzler*
Price £5.00
Micro BBC B
Supplier National Extension College
18 Brooklands Avenue
Cambridge CB2 2HN

COWBOYS

Saloon Sally is the first BBC release from Psion that isn't adapted from an original version of the Spectrum.

One of its key features is having a heroine rather than a hero as its chief protagonist.

As *Sally* the saloon owner, you must protect your saloon from brawling cowboys and collect gold.

Also ventured is a highly appropriate soundtrack in the form of the saloon pianist's accompaniment.

Sally can defend herself from the brawling hordes by throwing chairs and tables — completing a screen, by collecting all the gold, moves you on to the next screen.

Program *Saloon Sally*

21 GAMES

Don't blink. You might miss another book coming out for the Electron. Whatever uncertainties some of the computer press may have expressed about its place in the market, the book publishers are in no doubt.

21 electrifying games for your Electron is almost what it says, 21 not bad by book standard, games with some vague-y useful notes on the various techniques involved in each.

Not, therefore, bad value, but wait a year and it'll be 50

games for half the price.

Book *21 Games for the Electron*

London W1X 3LA

CRACK UNIT

Wintsoft's *Ring of Darkness* is considered by many to be the best ever game for the Dragon 32. It's perhaps surprising then, that the company has decided to issue its next program *Operation Gremlin* on the Oric.

Described as a kind of arcade adventure mix, your objective is to clear the space city of Syron of the hordes of gremlins who have swarmed over it.

Using single key instructions you command a crack unit of troopers who must be supplied with weapons for their battle — you must also get them safely out of the city once the battle is won.

You will need a mixture of quick reactions and strategy to do well.

Program *Operation Gremlin*
Price £6.95

I only brought one
cassette...

Ziggurat

A slice of the cake

Many moons ago, I wrote a few pieces in this column on the growth of microcomputer ownership.

One of my points was that to extrapolate from present trends to the future was a difficult and risky occupation. I also mentioned the "logistic" curve.

The logistic curve, for those new to the term, is a growth curve which is based on the idea that the probability that a person will buy an item will depend upon the proportion of people already with that item.

Or, to put it another way, the more people there are with a computer, the more likely it is that a person without a computer will decide to buy one. However, as the number remaining without dwindles, although the proportional rate of purchase is increasing, the actual numbers involved are getting smaller.

In short, the market becomes saturated and the rate of purchase slows.

In mathematics, the number of items bought will be proportional to $p^N(1-p)$, where p is the proportion of individuals who have one of the items (assuming that, unlike me, most people only have one computer).

The shape of the logistic curve is an elongated "S".

The curve starts fairly flatly, ie, it takes some time for the growth in numbers of items to pick up. If the curve was extrapolated at this stage then the resulting prediction would be far too low. I remember reading an editorial in *Practical Computing* sometime in 1980 in which there was a prediction that by the end of 1983 there

would be 300,000 computers in the UK. Sinclair alone has sold far more than that. That prediction was made at the flat point of the curve.

After this part of the curve the slope gets steadily steeper and steeper, and it is in this portion of the curve that growth appears explosive.

The rapid growth continues for a time, but soon a third phase is reached in which the growth begins to slow, as the market begins to saturate.

I believe that microcomputers are now in this third phase, with the fastest of the growth being in the past. (I believe it has been passed for some months, but there are no figures to check.)

Soon we will enter the final phase, in which there will be not just no growth. Nearly everyone who might want a computer will already have one. Then the pattern will change. People will begin to replace their old computer with either a new version of their old model or a more advanced machine. In this period, the absolute number of computers will not grow greatly, but (as with the car industry) computer manufacture will continue steadily, being based on the exchange market.

If I am correct, the market for cheap introductory computers is about to decline. Any new manufacturer with a low-cost computer has no chance at all, and most of the later manufacturers of cheap computers seem to be on a knife-edge. Sinclair and Commodore, being among the first, seem somewhat safer.

A few months ago, at the time when the market seemed to be exploding, the clamour to have a piece of the action led to proliferation in companies supplying the ancillaries to computers — software, hardware add-ons, the specialist shops and the magazines.

Everyone seemed to behave as if the then projected (and inaccurate) growth would continue indefinitely.

Now computer manufacturers are losing money, are becoming bankrupt, software houses are folding, and one computer shop I have seen is selling BMX bikes as well!

Companies are now fighting, ever more fiercely, for a share of a smaller cake.

And the number of casualties is rising. ■

Boris Allan

Puzzle

5th November

Puzzle No 80

Jamie, Sue and Ben were standing outside the corner shop, examining the fireworks they had just bought.

Each had chosen a different selection of five fireworks, and each had spent exactly £1. The fireworks were priced as follows:

Golden Waterfall	12p
Krakatoa Cascade	14p
Fairy Fireglow	18p
Mine of Serpents	32p
Depth Charge	48p

If Jamie had at least one Golden Waterfall and Sue had at least one Depth Charge, which fireworks did each buy?

Solution to Puzzle No 75

The distance, D , walked across the heath (in yards) is equal to $\sqrt{(1320^2 + a^2)}$, where $a = 1760 - N$ and N equals the distance, in yards, travelled along the road. The time taken (in hours) is given by $(N/4 + 1760) + (D/3 + 1760)$.

The program tries different routes, the times for which are entered into the dimensioned array, $A(N)$, and checked to find the shortest.

```
19 DIM A(1760) 20 FOR N = 1 TO 1760 30 LET D =
  SQR(1320^2 + 1760^2) + (1760 - N) + (1760 - N) 40
  LET A(N) = (N/4 + 1760) + (D/3 + 1760) 50 NEXT N
  60 LET T = 1 70 FOR N = 1 TO 1760 80 IF A(N) < T
  THEN GOSUB 200 90 NEXT N 100 PRINT "
  SHORTEST ROUTE = LEAVE ROAD", "AFTER "A;
  "YARDS" 110 STOP 120 LET M = N 210 LET T =
  A(N) 220 RETURN
```

Running the program shows that the quickest route is to leave the road 263 yards from Longfield.

Winner of Puzzle No 75

The winner is: Tim Clapp, Hasley Knob, Warwick, who receives £10.
